china s change to a new model of growth now called the new normal was always going to be hard events over the past year show how hard it is the attempts to moderate the extremes of high investment and low consumption the correction of overcapacity in the heavy industries that were the mainstays of the old model of growth the hauling in of the immense debt hangover from the fiscal and monetary expansion that pulled china out of the great crash of 2008 would all have been hard at any time they are harder when changes in economic policy and structure coincide with stagnation in global trade and rising protectionist sentiment in developed countries extraordinarily rapid demographic change and recognition of the urgency of easing the environmental damage from the old model china s economy has slowed and there are worries that the authorities will not be able to contain the slowdown within preferred limits this year s update explores the challenge of the slowdown in growth and the change in economic structure leading experts on china s economy and environment review change within china s new model of growth and its interaction with ageing environmental pressure new patterns of urbanisation and debt problems at different levels of government it illuminates some new developments in china s economy including the transformational potential of internet banking and the dynamics of financial market instability china s economic development since 1978 is full of exciting change and this year s china update is again the way to know it as it is happening

as cities in developing countries grow and become more prosperous energy use shifts from fuelwood to fuels like charcoal kerosene and coal and ultimately to fuels such as liquid petroleum gas and electricity energy use is not usually considered as a social issue

yet as this book demonstrates the movement away from traditional fuels has a strong socio economic dimension as poor people are the last to attain the benefits of using modern energy the result is that health risks from the continued use of wood fuel fall most heavily on the poor and indoor pollution from wood stoves has its greatest effect on women and children who cook and spend much more of their time indoors barnes krutilla and hyde provide the first worldwide assessment of the energy transition as it occurs in urban households drawing upon data collected by the world bank energy sector management assistance programme esmap from 1984 2000 the program conducted over 25 000 household energy surveys in 45 cities spanning 12 countries and 3 continents additionally gis mapping software was used to compile a biomass database of vegetation patterns surrounding 34 cities using this rich set of geographic biological and socioeconomic data the authors describe problems and policy options associated with each stage in the energy transition the authors show how the poorest are most vulnerable to changes in energy markets and demonstrate how the collection of biomass fuel contributes to deforestation their book serves as an important contribution to development studies and as a guide for policymakers hoping to encourage sustainable energy markets and an improved quality of life for growing urban populations
