intelligent computing is a computational approach primarily inspired by the objective laws governing biological groups in nature as well as the behaviors of biological thinking and movement it encompasses various algorithmic fields such as evolutionary computation swarm intelligence computation neural computation and more these algorithms typically achieve the goals of intelligent computing by simulating the distinctive functions of certain species in nature or specific characteristics of natural phenomena by programming and executing the collective wisdom of biological groups and leveraging natural laws optimization algorithms with intelligent essence are designed this book serves as an introduction to widely used and common intelligent computing methods it covers fundamental concepts principles model characteristics and typical application examples of various intelligent computing methods additionally it provides the latest examples along with corresponding matlab or python codes facilitating readers in deepening their understanding and reproducing the content the target audience for this book includes senior undergraduate and graduate students majoring in automation artificial intelligence intelligent science and technology computer science and related fields it can also serve as a valuable self study reference for professionals in computer science artificial intelligence and related disciplines

although computer technology has dramatically improved the analysis of complex transport phenomena the methodology has yet to be effectively integrated into engineering curricula the huge volume of literature associated with the wide variety of transport processes cannot be appreciated or mastered without using innovative tools to allow comprehen
