this text features a careful treatment of flow lines and algebraic invariants in contact form geometry a vast area of research connected to
 symplectic field theory pseudo holomorphic curves and gromov witten invariants contact homology in particular it develops a novel
 algebraic tool in this field rooted in the concept of critical points at infinity the new algebraic invariants defined here are useful in the
 investigation of contact structures and reeb vector fields the book opens with a review of prior results and then proceeds through an
 examination of variational problems non fredholm behavior true and false critical points at infinity and topological implications an
 increasing convergence with regular and singular yamabe type problems is discussed and the intersection between contact form and

riemannian geometry is emphasized rich in open problems and full detailed proofs this work lays the foundation for new avenues of study in contact form geometry and will benefit graduate students and researchers

the application of computational intelligence in emerging research areas such as granular computing mechatronics and bioinformatics shows its usefulness often emphasized by prof lotfi zadeh the inventor of fuzzy logic and many others this book contains recent advances in computational intelligence methods for modeling optimization and prediction and covers a large number of applications the book presents new computational intelligence theory and methods for modeling and prediction the range of the various applications is captured with 5 chapters in image processing 2 chapters in audio processing 3 chapters in commerce and finance 2 chapters in communication networks and 6 chapters containing other applications

starting from psychophysics over the last 50 years most progress in unravelling the mechanisms of color vision has been made through the study of single cell responses mainly in lgn and striate cortex a similar development in the study of form perception may seem to be underway centred on the study of temporal cortex however because of the combinatorial characteristics of form perception we are also observing the opposite tendency from single cell activity to population coding and from static receptive field structures to system dynamics and integration and ultimately a synthetic form of psychophysics of color and form perception from single cells to system integration it is this development the present research topic wishes to highlight and promote how does this development affect our views

on the various attributes of perception in particular we are interested in to what extent evolving knowledge in the field of color perception is relevant within a developing integrative framework of form perception the goal of this research topic is to bring together experimental research encompassing both color and form perception for this volume we planned a broad scope of topics on color in complex scenes color and form as well as dynamic aspects of form perception we expect that the research topic will be attractive to the community of researchers whose work straddles the boundary between the two visual perception fields as well as to the wider community interested in integrative systems neuroscience
