unos beneficios impresionantes Monsanto se ha convertido en la empresa líder de los organismos genéticamente modificados OGM así como en una de las compañías más controvertidas de la industria mundial por la fabricación de PCB, piraleno, devastadores herbicidas como el agente naranja durante la guerra de Vietnam o la hormona de crecimiento bovino prohibida en Europa desde 1901. Desde su fundación la empresa de Missouri ha ido acumulando infinidad de procesos penales debido a la toxicidad de sus productos aunque hoy se presenta como una empresa de ciencias de la vida reconvertida a las virtudes del desarrollo sostenible gracias a la comercialización de las semillas transgénicas más del 90 del mercado mundial. Monsanto no sólo controla una parte importante de la alimentación mundial y la forma en que se produce sino que pretende extender su poder sobre las formas de vida tradicionales de una parte importante del planeta basándose en documentos inéditos, testimonios de afectados y víctimas, campesinos reconocidos, científicos y destacados políticos. El mundo según Monsanto reconstruye la génesis y desarrollo de este gigante industrial, la primera productora mundial de semillas, una empresa que según declaran sus responsables sólo quiere nuestro bienestar.

The basis of this proposal is the study of quality of life from an interdisciplinary perspective. This volume presents a set of contributions from different sciences that analyse the quality of life in Argentina. The contributions come from the social disciplines: geography, economics, demography, history, and from the field of health: nutrition, medicine, psychology, as well as the applied sciences: statistics, applied mathematics. The purpose is to present various dimensions related to the well-being of the population, particularly in relation to poverty, human development, health, nutrition, and morbidity. Although there are works from different sciences associated with the object of study, they all have a geographic component based on cartography. Consequently, the importance of geography is highlighted as the territorial base allows for the study of quality of life from a unique perspective where the map emerges as a fundamental descriptive tool. Such an approach is useful to diagnose the quality of life and its uneven spatial distribution, either through index or different associated variables. Thus, the maps are fundamental to study the territorial configuration of the quality of life at

the different scales of analysis showing spatial inequalities and the areas where it is necessary to take measures to improve the population s living conditions
