the oxford handbook of thinking and reasoning brings together the contributions of many of the leading researchers in thinking and reasoning to create the most
comprehensive overview of research on thinking and reasoning that has ever been available each chapter includes a bit of historical perspective on the topic and concludes
with some thoughts about where the field seems to be heading

this classic volume compiles and describes interdisciplinary research on the formal nature of human knowledge about the world three key dimensions that characterize mental models research are examined the nature of the domain studied the nature of the theoretical approach and the nature of the methodology

due largely to developments made in artificial intelligence and cognitive psychology during the past two decades expertise has become an important subject for scholarly investigations the nature of expertise displays the variety of domains and human activities to which the study of expertise has been applied and reflects growing attention on learning and the acquisition of expertise applying approaches influenced by such disciplines as cognitive psychology artificial intelligence and cognitive science the contributors discuss those conditions that enhance and those that limit the development of high levels of cognitive skill

the motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see brown chapter 1 the handbook grew out of a series of discussions that spanned several years at the heart of most of our interactions was a profound unhappiness with the state of research on creativity our consensus was that the number of good works published on creativity each year was small and growing smaller further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity at the same time we were casting about for a means of honoring a dear friend e paul torrance our decision was that we might best be able to honor paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views
