the basis for the emmy winning film a wonderful highly readable account of the history of the universe from the big bang through the present moment thomas lovejoy university professor in environmental science and policy george mason university through the astonishing combined achievements of natural scientists worldwide we now have a detailed account of how galaxies and stars planets and living organisms human beings and human consciousness came to be and yet we thirst for answers to questions that have haunted humanity from the very beginning what is our place in the 14 billion year history of the universe what roles do we play in earth s history how do we connect with the intricate web of life on earth in journey of the universe brian thomas swimme and mary evelyn tucker tell the epic story of the universe from an inspired new perspective weaving the findings of modern science together with enduring wisdom found in the humanistic traditions of the west china india and

indigenous peoples the authors explore cosmic evolution as a profoundly wondrous process based on creativity connection and interdependence and they envision an unprecedented opportunity for the world's people to address the daunting ecological and social challenges of our times journey of the universe transforms how we understand our origins and envision our future though a little book it tells a big story one that inspires hope for a way in which earth and its human civilizations could flourish together what's most striking about swimme and tucker's work is a simple but beautiful assumption a cosmological orientation opens the human mind to wonder gratitude humility and creativity orion

a leading cosmologist explains our current understanding of space and time there was immense excitement in the scientific community and among the general public when the coBE space probe sent back data that proved not only that the big bang had happened but also that it had happened at more or less exactly the time that astronomers had calculated barrow describes these finds and then goes on to explain how they allow us to reach back and shed light upon events at the dawn of time what does it mean to say that the universe appeared out of nothing did it need a beginning and will it ever end why do we think that most of the universe is invisible the ideas that cosmologists are wrestling with are challenging and extraordinary here they are explained with unfailing fluency

the future of the expanding cosmos is the twenty third instalment in the little blue book series and comprises of discourse thirty nine of the monodoxy which is itself the first disquisition of the omnodoxy the founding treatise of astronism this single discourse publication introduces the discipline of cosmontology known as omnology which deals with all theories concepts and beliefs regarding the nature form purpose and eventualities of the expansion of the cosmos the little blue book series was created and first published by cometan himself as a way to simplify and commercialise the immensity of the two million word length of the omnodoxy into smaller more bite size publications a successful series from its very first published entry the little blue book series has gone on to become a symbol of astronist commercial literature and a way for cometan's words to reach readers of all ages and abilities who remain daunted by the beauty and yet the sheer extensiveness of the omnodoxy as the longest religious text in history

the study of the origin and evolution of the universe encompasses many of the most fascinating questions in science what is our place in the universe how did everything in it get started from galaxies and stars to planets and people and what does the future hold for our star and our universe recently scientists have made remarkable advances in providing concrete answers to these profound questions the new technologies of observational astronomy with its ground and space based gamma ray x ray ultraviolet infrared and radio telescopes is truly producing a new golden age of discovery this book presents the excitement of these new discoveries in the larger context of cosmic evolution the distinguished contributors are leading researchers at the cutting edge of these fields and they also excel in explaining these subjects to the broader public they offer the latest insights into these rapidly advancing fields covering the origin and evolution of the universe the chemical elements galaxies the evolution of stars planets and biological life essential physical concepts are clearly and carefully explained at the introductory college level related concepts from chemistry geology and biology are organized and integrated into the discussions an extensive glossary is provided and

mathematical detail has been deliberately kept simple to make the chapters accessible to anyone with an appreciation of science the result is stimulating exploration of the frontiers of modern science that will intrigue both amateurs and professionals

this book critically explores answers to the big question what produced our universe around fifteen billion years ago in a big bang it critiques contemporary atheistic cosmologies incl steady state oscillationism big fizz that affirm the eternity self sufficiency of the universe without god it defends and revises process theology and arguments for god s existence from the universe s life supporting order contingent existence

the structure of the universe by paul halpern ph d originally published in 1996 is a tour of the knowledge of the deep reaches of space and predictions for its future technological marvels such as the hubble space telescope are revealing a wealth of information about the deepest reaches of space after decades of research scientists now believe they are closer to discovering the missing matter the invisible stuff left over from the big bang that will determine the ultimate fate of the universe with each discovery new light is shed on scores of old questions and at the same time new questions arise

essential guide to astrophysics is perfect for anyone who has ever looked up at the night sky and wondered about the universe written clearly and engagingly it covers the basics of astrophysics from the history of the field to cutting edge research we start with telescopes and other tools astronomers use to study the universe then dive into stars their life cycles how they produce energy and what happens when they die galaxies are another major topic including our milky way and other types found throughout the universe the book explores the big bang theory dark matter dark energy and the ultimate fate of the universe the search for life beyond earth is also covered including finding exoplanets and conditions necessary for life we explore our solar system including the sun planets moons and other objects essential guide to astrophysics tackles complex topics like black holes gravitational waves and the future of space exploration with helpful appendices explaining any math or unfamiliar terms if you ve ever been curious about the universe essential guide to astrophysics is a great place to start

the asymmetry of natural phenomena under time reversal is striking here zehinvestigates the most important classes of physical phenomena that characterize the arrow of time discussing their interrelations as well as striving to uncover a cosmological common root of the phenomena such as the time independent wave function of the universe the description of irreversible phenomena is shown to be fundamentally observer related both physicists and philosophers of science who reviewed the first edition considered this book a magnificent survey a concise technically sophisticated up to date discussion of the subject showing fine sensivity to some of the crucial philosophical subtleties this new and expanded edition will be welcomed by both students and specialists

why believe provides accessible explanations of several core concerns of apologetics from arguments for the existence of god and the validity of christ s resurrection to common questions about the practice of faith

since the dawn of time men have gazed at the stars and attempted to chart the heavens in this book astrophysicist joe mcevoy tells the story of this eternal striving to uncover the mysteries of the universe
