Paul Hill was a well-respected NASA scientist when in the early 1950s he had a UFO sighting. Soon after he built the first flying platform and was able to duplicate the UFO's tilt to control maneuvers. Official policy, however, prevented him from proclaiming his findings. "I was destined," says Hill, "to be as unidentified as the flying objects for the next twenty-five years." Hill acted as an unofficial clearinghouse at NASA, collecting and analyzing sightings reports for physical properties, propulsion possibilities, dynamics, etc. To refute claims that UFOs defy the laws of physics, he had to make technological sense of the unconventional object. After his retirement from NASA, Hill finally completed his remarkable analysis. This book, published posthumously, presents his findings that UFOs obey—not defy—the laws of physics. Vindicating his own sighting and thousands of others, he proves that UFO technology is not only explainable but attainable.
