david c edwards provides the best of contemporary findings and summarizes how past research contributes to current thought within each topically organized chapter which all begin with a concise overview statement and end with a personal summary the author highlights material of special importance and concludes major sections with a summary each chapter also ends with a set of questions that will help student readers

for a long time i have had the gnawing desire to convey the broad motivational significance of the attributional conception that i have espoused and to present fully the argument that this framework has earned a rightful place alongside other leading theories of motivation furthermore recent investigations have yielded insights into the attributional determinants of affect thus providing the impetus to embark upon a detailed discussion of emotion and to elucidate the relation between emotion and motivation from an attributional perspective the presentation of a unified theory of motivation and emotion is the goal of this book my more specific aims in the chapters to follow are to 1 outline the basic principles that i believe characterize an adequate theory of motivation 2 convey what i perceive to be the conceptual contributions of the perspective advocated by my colleagues and me 3 summarize the empirical relations reach some definitive conclusions and point out the more equivocal empirical associations based on hypotheses derived from our particular attribution theory and 4 clarify questions that have been raised about this

conception and provide new material for still further scrutiny in so doing the building blocks if any laid down by the attributional conception will be readily identified and unknown juries of present and future peers can then better determine the value of this scientific product

originally published in 1989 this title provided a wide ranging and up to date review of a traditional area of psychology it will be of great interest to all those who wish to discover what governs human behaviour and feeling in other words what makes people tick phil evans explores the influences that determine a range of behaviour from those with clear biological links such as eating sleeping and sexual activity to those specifically human concerns such as the need to achieve success or approval he also analyses the feelings and emotions that often guide behaviour he gives a detailed outline of various theoretical perspectives on what it is to be a human being whether a biological organism with biological needs a responder to environmental signals of pleasure or a cognitively aware agent continuously processing information regarding current circumstances his review of both cognitive and biosocial approaches conveys the liveliness of debate and argument within psychology at the time and demonstrates that an understanding of all views is necessary to illuminate fully the complex nature of human behaviour

this book presents the contributions of the members of an advanced research workshop on cognitive science perspectives on emotion motivation and cognition the workshop funded mainly by the nato scientific affairs division together with a contribution from the british economic and social research council was conducted at ii ciocco tuscan y italy 21 27 june 1987 the venue for our discussions was ideal a quiet holiday hotel 500m high in the apennine mountain range approached by a mile of perilously steep winding narrow road the isolation was conducive to concentrated discussions on the topics of the workshop the reason for the workshop was a felt need for researchers from disparate but related approaches to cognition emotion and motivation to communicate their perspectives and arguments to one another to take just one example the framework of information processing and the metaphor of mind as a computer has wrought a major revolution in psychological theories of cognition that framework has radically altered the way psychologists conceptualize perception memory language thought and action those advances have formed the intellectual substrate for the cognitive science perspective on mental life

the central argument of this book is that cognition is not the whole story in understanding intellectual functioning and development to account for inter individual intra individual and developmental variability in actual intellectual performance it is necessary to treat cognition emotion and motivation as inextricably related motivation emotion and cognition integrative perspectives on intellectual functioning and development represents a new direction in theory and research on intellectual functioning and development portrays human intelligence as fundamentally constrained by biology and adaptive needs but modulated by social and cultural forces and encompasses and integrates a broad range of scientific findings and advances from cognitive and affective neurosciences to cultural psychology addressing fundamental issues of individual differences developmental variability and cross cultural differences with respect to intellectual functioning and development by presenting current knowledge regarding integrated understanding of intellectual functioning and development this volume promotes exchanges among researchers concerned with provoking new ideas for research and provides educators and other practitioners with a framework that will enrich understanding and guide practice

the articles gathered in this volume represent examples of a unique approach to the study of mental phenomena a blend of theory and experiment informed not just by easily measurable laboratory data but also by human introspection subjects such as approach and avoidance desire and fear and novelty and habit are studied as natural events that may not exactly correspond to but at least correlate with some known or unknown electrical and chemical events in the brain

psychological theory has traditionally attempted to explain events in terms of motivation emotion or cognition over the past decade psychology has come to be viewed as a paradigmatic science the new paradigm being the understanding of behavior in terms of cognitive representations this cognitive revolution has fostered a view of the passing of information back and forth between perceptual memory and motor components of an integrated system known as the computational metaphor with cognition as the new paradigm can we expect that the explanatory scope of psychology will be clarified with a cognitive perspective be extended to phenomena that have traditionally fallen under the rubric of motivation and emotion the psychologists involved in this volume of the nebraska symposium address these questions specifically their contributions stimulate a hypothesis that the cognitive paradigm has begun to move psychology toward a unified field theory of behavior and experience herbert a simon tests the limits of a pure information processing paradigm a basic tenet of this theoretical approach is that information exists independent of the medium by which it is represented by analyzing the information processing capabilities of nonbiological systems or artificial intelligence we may determine which aspects of motivation and emotion require the biological substrate of

cognition muriel d lezak raises a similar question by focusing on the biological substrate itself and by analyzing the constraints and determinations that it imposes howard gardner considers the medium and the information it processes thus he lays a conceptual foundation for making the facts of biological brain science congruent with the richness of human behavior and experience

the theoretical background to this book is provided by reversal theory a general psychological theory which is demonstrating its usefulness and versatility as it is being increasingly applied within sport psychology
