t f torrance s proposal for natural theology constitutes one of the most creative and provocative elements in his work by re envisioning natural theology as the cognitive structure of theology determined by god s self revelation in jesus christ and not as the task of philosophically reflecting on the nature or existence of god aside from religious presuppositions torrance moves through and beyond barth s resistance to natural theology this book establishes torrance s unique reconstruction of natural theology within its proper intellectual context providing a fresh analysis of this important methodological innovation as it emerges from torrance s realist epistemology as irving demonstrates in torrance s distinctive conception of science he operated with an approach to cognition that functions via a realist synthesis of experience and understanding and in torrance s theological science this synthesis of experience and understanding is the synthesis of revealed theology and natural theology the author argues that this reconstruction of natural theology expresses a dramatic vision for human agency within theological cognition adding the necessity of the human knowing subject to the priority of the divine revealer finally this book marries torrance s accomplishments in reconstructing natural theology to his christocentric theological method in

which god is both revealed and known in the person of jesus christ fully god and fully human
