with perceived exertion for practitioners rating effort with the omni picture system you ll have the most up to date innovative way to rate clients physical exertion in your professional practices you ll be able to expand your knowledge of perceived exertion as used

today by health and fitness specialists and clinical therapeutic practitioners and you will learn how to apply the newly developed omni picture system of perceived exertion author and highly acclaimed researcher Robert Robertson developed the omni picture system which uses picture scales to enable exercisers to rate their exertion visually in this text Dr Robertson presents real life scenarios involving perceptually based exercise assessments and programming using the omni scaling system the scenarios focus on people with various training and conditioning needs from improving personal health to developing recreational and competitive fitness by rating their effort based on pictures of other exercisers your clients will be able to accurately set and regulate their conditioning intensity using a target rating of perceived exertion RPE zone special features of perceived exertion for practitioners include the following 11 omni picture scales which apply to all types of exercise and are reproducible for use as handouts in fitness facilities and in classrooms sample instructions on what to say to clients in various situations both clinical and field based perceptual tests for use in aerobic anaerobic and resistance exercise assessments case studies that describe the clients characteristics identify the exercise need and present an action plan to meet that need using RPE as the training zone actual programs for aerobic anaerobic and resistance training that employ omni scale RPE zones to guide intensity perceived exertion for practitioners gives you a broader understanding of perceived exertion and you will be able to apply what is in the text by using the 11 picture scales included the text is a must have for anyone looking for a better way to use ratings of perceived exertion to develop training programs

originally published in 1974 this book sets forth a theory of cognitive development based on simple but powerful processes of inference the theory is applied with great ingenuity and freshness to complex phenomena found during intellectual development Dr Bryant has written an important and original book J S Bruner in this elegant timely and brief volume Dr Bryant produces strong experimental evidence which not only challenges Piaget's ideas but even more importantly synthesizes the old and new findings into a newer theory of perceptual development the importance of this book lies both in its demonstration of elegant experimental techniques in working with young children and in the optimism it will eventually bring to all concerned with their education realizing that children can make deductive inferences at an early age educators will have to rethink some of their approaches to the teaching of young children the studies related to the understanding of number have crucial implications for the future teaching of mathematics this book will cause many people to take fresh thoughts on the subjects here dealt with and so it can be strongly recommended for all students of child development William Yule British Journal of Psychiatry

proposing a new paradigm for perceptual science that goes beyond standard information theory and digital computation this book breaks with the conventional model of perception that views vision as a mere inference to an objective reality on the basis of inverse optics the authors offer the alternative view that perception is an expressive and awareness generating process perception creates semantic information in such a way as to enable the observer to deal efficaciously with the chaotic and meaningless structure present at the physical boundary between the body and its surroundings vision is intentional by its very nature visual qualities are

essential and real providing an aesthetic and meaningful interface to the structures of physics and the state of the brain this view brings perception firmly in line with ethology and modern evolutionary biology and suggests new approaches in all disciplines that study or require an understanding of the ontology of mind the book is the joint effort of a multidisciplinary group of authors topics covered include the relationships among stimuli neuronal processes and visual awareness after considering the mind dependent growing of information the book treats time and dynamics color shape and space language and perception perception art and design

the book analyses the differences between the mathematical interpretation and the phenomenological intuition of the continuum the basic idea is that the continuity of the experience of space and time originates in phenomenic movement the problem of consciousness and of the spaces of representation is related to the primary processes of perception conceived as an interplay between cognitive science linguistics and philosophy the book presents a conceptual framework based on a dynamic and experimental approach to the problem of the continuum besides presenting the primitives of a theory of cognitive space and time it presents a theory of the observer analyzing the relationship among perspective points of view and unity of consciousness the book's chapters deal with the dynamic elaboration and recognition of forms from the lower to the higher processes in the various perceptual fields experimental analysis from visual auditory and tactile perception outline the basic structures of intentionality and its counterpart in language and gesture series b

the roots of cognitive neuroscience examines the way brain damage can impair our cognitive and emotional systems in chapters that range from examining memory and language to emotions and creativity this book demonstrates that behavioral neurology and neuropsychology are just as relevant today as these research strategies were 150 years ago

a wiley interscience publication

written by well known specialists here is the most comprehensive handbook available on human perception and performance this volume covers theory and methods basic visual processes auditory kinesthetic cutaneous and vestibular senses and space and motion perception volume two treats information processing perceptual organization and cognition and human performance

this highly acclaimed book provides a theoretically balanced introduction to the study of basic physiology and sensory responses the authors survey a broad range of topics and present different theories and perspectives in controversial areas demonstrations allow the reader to experience many of the perceptual phenomena firsthand using common household items or illustrations in the book describes natural instances of perceptual phenomena to bring the subject matter to life
