if our planet is going to survive the climate crisis we need to act rapidly taking cues from progressive cities around the world including los angeles new york toronto oslo shenzhen and sydney this book is a summons to every city to make small but significant changes that can drastically reduce our carbon footprint we cannot wait for national governments to agree on how to reduce greenhouse gas emissions and manage the average temperature

rise to within 1.5 degrees in solved. David Miller argues that cities are taking action on climate change because they can and because they must. The updated paperback edition of solved: how the world's great cities are fixing the climate crisis demonstrates that the initiatives cities have taken to control the climate crisis can make a real difference in reducing global emissions if implemented worldwide by chronicling the stories of how cities have taken action to meet and exceed emissions targets laid out in the Paris Agreement. Miller empowers readers to fix the climate crisis as much a how-to guide for policymakers as a work for concerned citizens. solved aims to inspire hope through its clear and factual analysis of what can be done now today to mitigate our harmful emissions and pave the way to a 1.5 degree world.

Bringing together comparative case studies from Belfast, Beirut, Amsterdam, and Berlin, this book examines the role of the urban environment in social polarisation processes. In doing so, it provides a timely and refreshingly innovative voice in the confusing babble on counter terrorism, urban conflict, and community cohesion. Despite their socio-political differences, these cities are telling cases of how the location and shape of very mundane objects such as rubbish bins, bridges, clothes stores, shopping malls, and cafés, in addition to the obvious fences, walls, and barbed wire, are often subject to heated controversies and influence the way urban conflict is lived and practised. Within a science and technology studies (STS) theoretical framework, the authors provide a systematic analysis of these four cities and provide many concrete and richly illustrated examples of material agency without losing sight of their specific historical, political, geographical, and social conditions. The STS angle permits some surprising yet extremely convincing conclusions which are of use not only for a range of practitioners but also to scholars interested in the social shaping processes and the consequences of urban artefacts. The authors argue that although architecture and urban design is clearly not the sole cause of conflict and polarisation, neither is it completely innocent; conversely, it cannot be the silver bullet to solve related problems and to create community cohesion. However, the materiality of our cities must not be ignored; in fact, it can and should be enrolled in our efforts. The book contains detailed descriptions of such positive cases as inspiration for practitioners as diverse as policy makers, architects, urban designers, planners, community workers, consultants, or police officers.

Could the vitality of embodied experience create a foundation for a new form of revolutionary authority? The life of the city is a bold and innovative reassessment of the early urban avant-garde movements that sought to re-imagine and reinvent the

experiential life of the city constructing a ground breaking theoretical analysis of the relationships between biological life urban culture and modern forms of biopolitical experiential authority julian brigstocke traces the failed attempts of parisian radicals to turn the crisis of authority in late nineteenth century paris into an opportunity to invent new forms of urban commons the most comprehensive account to date of the spatial politics of the literary artistic and anarchist groups that settled in the montmartre area of paris after the suppression of the 1871 paris commune the life of the city analyses the reasons why laughter emerged as the unlikely tool through which parisian bohemians attempted to forge a new non representational biopolitics of sensation ranging from the carnivalesque performances of artistic cabarets such as the chat noir to the laughing violence of anarchist terrorism the life of the city is a timely analysis of the birth of a carnivalesque politics that remains highly influential in contemporary urban movements

urbanization is a global phenomenon that is increasingly challenging human society it is therefore crucially important to ensure that the relentless expansion of cities and towns proceeds sustainably urban ecology the interdisciplinary study of ecological patterns and processes in towns and cities is a rapidly developing field that can provide a scientific basis for the informed decision making and planning needed to create both viable and sustainable cities urban ecology brings together an international team of leading scientists to discuss our current understanding of all aspects of urban environments from the biology of the organisms that inhabit them to the diversity of ecosystem services and human social issues encountered within urban landscapes the book is divided into five sections with the first describing the physical urban environment subsequent sections examine ecological patterns and processes within the urban setting followed by the integration of ecology with social issues the book concludes with a discussion of the applications of urban ecology to land use planning the emphasis throughout is on what we actually know as well as what we should know about the complexities of social ecological systems in urban areas in order to develop urban ecology as a rigorous scientific discipline
