según las leyes del movimiento establecidas por primera vez con detalle por isaac newton hacia 1680 89 dos o más movimientos se suman de acuerdo con las reglas de la aritmética elemental supongamos que un tren pasa a nuestro lado a 20 kilómetros por hora y que un niño tira desde el tren una pelota a 20 kilómetros por hora en la dirección del movimiento del tren para el niño que se mueve

junto con el tren la pelota se mueve a 20 kilómetros por hora pero para nosotros el movimiento del tren y el de la pelota se suman de modo que la pelota se moverá a la velocidad de 40 kilómetros por hora como veis no se puede hablar de la velocidad de la pelota a secas lo que cuenta es su velocidad con respecto a un observador particular cualquier teoría del movimiento explicar la manera en que las velocidades y fenómenos afines parecen variar de un observador a otro sería una teoría de la relatividad la teoría de la relatividad de Einstein nació del siguiente hecho lo que funciona para pelotas tiradas desde un tren no funciona para la luz en principio podría hacerse que la luz se propagara o bien a favor del movimiento terrestre o bien en contra de él en el primer caso parecería viajar más rápido que en el segundo de la misma manera que un avión viaja más aprisa en relación con el suelo cuando lleva viento de cola que cuando lo lleva de cara sin embargo medidas muy cuidadosas demostraron que la velocidad de la luz nunca variaba fuese cual fuese la naturaleza del movimiento de la fuente que emitía la luz
