there has been a recent resurgence of interest in the work of vilfredo pareto one of the founders of modern economics this book reconstructs the genesis and significance of pareto s theory of choice which is pareto s greatest contribution to economic science and which was used by john hicks amongst others to develop microeconomics hicks allen samuelson and others acknowledged pareto as the father of the new ordinalist microeconomics but at the same time portrayed him as confused and contradictory caught between the old and new paradigms luigino bruni argues that pareto s revolution in choice theory is better understood in the context of his own philosophical framework this framework is revealed by reconstructing his dialogues with economists pantaleoni and philosophers vailati and croce and by exploring pareto s economic theory in the light of his philosophy of science in addition luigino bruni argues that pareto s contribution was different and more complex than hicks s ordinalism and samuelson s operationalism from this analysis emerges an image of pareto as a man whose ideas and work was only partially fulfilled this original and sometimes unconventional book will be of great interest to economists historians of economic thought and philosophers of the social sciences

contrary to widely held beliefs microeconomic theory bears no relation to the size of the product under consideration indeed a micro theorist can just as easily discuss the sale of a whale as he would discuss a whale of a sale in amoebae in fact it possibly is true that a theorist and a microeconomic theorist in particular does not have any specific products in mind when he bandies his propositions about nor does he have to for these in the final analysis are just that propositions they are propositions that are motivated by economic reality as observable not to mention controllable as that may be but they are no more and no less than comments about that economic reality and they emphatically are not descriptive assays of it they are more or less caricatures of economic reality or metaphors where bold distortions are pressed to the task of describing preconceived visions of that reality these visions given their fundamentally qualitative nature are hardly fit to be put to the test of statistical verification perhaps only the judgement and intuitive feel of practicing economists over the years are the only true tests of the viability and robustness of these propositional comments on economic reality which make up the body of economic theory it is not the abstractions that make the difference all science is that way metaphoric

foundations of heterodox macroeconomic analyses part iii expands the analysis of the capitalist social provisioning process with an emphasis on its subsystems and their relationships over historical time part iv encapsulates the life and work of frederic s lee throughout his intellectual life frederic s lee has shown to many that the development of heterodox economics is rendered possible by unselfish and ceaseless efforts to build both theory and institutions essays in this book attest that establishing an alternative critical theory to the status quo is not only possible but also serviceable to the majority of the population
