In August 2005 over 500 international researchers from the field of science education met at the 5th European Science Education Research Association conference in Barcelona, Spain. Two of the main topics at this conference were the decrease in the number of students interested in school science and concern about the worldwide outcomes of studies on students' scientific literacy. At the conference over 400 papers were presented covering a wide range of topics relevant to science education research such as evidence-based practice, teachers' professional development, the role of ICT and multimedia, formal and informal learning environments, and argumentation and modelling in science education. This volume includes edited versions of 37 outstanding papers presented during the conference including the lectures of the keynote speakers. They have been selected for their quality, variety and interest and present a good overview of the field of science education research.

proven and tested guidelines for designing ideal labs for scientific investigations now in its fourth edition guidelines for laboratory design continues to enable readers to design labs that make it possible to conduct scientific investigations in a safe and healthy environment the book brings together all the professionals who are critical to a successful lab design discussing the roles of architects engineers health and safety professionals and laboratory researchers it provides the design team with the information needed to ask the right questions and then determine the best design while complying with current regulations and best practices guidelines for laboratory design features concise straightforward advice organized in an easy to use format that facilitates the design of safe efficient laboratories divided into five sections the book records some of the most important discoveries and achievements in part ia common elements of laboratory design sets forth technical specifications that apply to most laboratory buildings and modules part ib common elements of renovations offers general design principles for the renovation and modernization of existing labs part ii design guidelines for a number of commonly used laboratories explains specifications best practices and guidelines for nineteen types of laboratories with three new chapters covering nanotechnology engineering and autopsy labs part iii laboratory support services addresses design issues for imaging facilities support shops hazardous waste facilities and laboratory storerooms part iv hvac systems explains how to heat cool and ventilate labs with an eye towards energy conservation part v administrative procedures deals with bidding procedures final acceptance inspections and sustainability the final part of the book features five appendices filled with commonly needed data and reference materials this fourth edition is indispensable for all laboratory design teams whether constructing a new laboratory or renovating an old facility to meet new objectives
