lithuania s current credit cycle highlights the strong link between housing prices and credit we explore this relationship in more detail by analyzing the main features of credit housing price and output cycles in baltic and nordic countries during 1995 2017 we find a high degree of synchronization between lithuania s credit and housing price cycles panel regressions show a strong correlation between a credit upturn and housing price upturn moreover panel var suggests that shocks in housing prices credit and output within and outside lithuania strongly impact lithuania s credit

to the authors of this book today s world is postmodern they see a fragmented world it seems to have become implausible to find a common point of view a unity in purpose or truth postmodernity challenges christian faith because it appears to go against the very grain of a sense of tradition communion and commitment on the eve of his election pope benedict xvi warned against the dictatorship of relativism would it still be possible to find genuine christian ways to live in postmodern times this collection of essays by a group of dutch theologians will stimulate the imagination of anyone who reads them

focusing on shocks modeling burn in and heterogeneous populations stochastic modeling for reliability naturally combines these three topics in the unified stochastic framework and presents numerous practical examples that illustrate recent theoretical findings of the authors the populations of manufactured items in industry are usually heterogeneous however the conventional reliability analysis is performed under the implicit assumption of homogeneity which can result in distortion of the corresponding reliability indices and various misconceptions stochastic modeling for reliability fills this gap and presents the basics and further developments of reliability theory for heterogeneous populations specifically the authors consider burn in as a method of elimination of weak items from heterogeneous populations the

real life objects are operating in a changing environment one of the ways to model an impact of this environment is via the external shocks occurring in accordance with some stochastic point processes the basic theory for poisson shock processes is developed and also shocks as a method of burn in and of the environmental stress screening for manufactured items are considered stochastic modeling for reliability introduces and explores the concept of burn in in heterogeneous populations and its recent development providing a sound reference for reliability engineers applied mathematicians product managers and manufacturers alike

achieving development goals is subject to economic uncertainties yet policymaking rarely accounts for these risks this country brief quantifies the risks facing uganda s economy and population focusing on two primary sources external risks stemming from shocks in international commodity prices and foreign capital flows and domestic risks associated with production shocks in volatile sectors of the uganda economy such as primary agriculture and hydropower electricity generation are often caused by extreme weather the significance of these risks is assessed based on the range of the shocks impacts on four main economic and development indicators total gdp private consumption poverty rate and prevalence of undernourishment the analysis uses data mining methods to simultaneously sample many shocks from historical data constructing a comprehensive set of realistic shock scenarios for uganda a country specific economywide computable general equilibrium cge model then simulates the impacts of these shocks on both total and sector specific economic outcomes deriving changes in poverty and undernourishment for each shock scenario finally machine learning techniques are applied to obtain metrics for the relative importance of different risk factors the results suggest that domestic production volatility is the primary risk factor affecting gdp and poverty in uganda whereas world markets and domestic risks are equally important for household consumption and undernourishment individually the most critical risk factors identified include production volatility in root crops volatility in foreign capital flows and volatility in fishery production with the latter being particularly significant for rural low income households understanding these economic risks is a critical first step in facilitating discussions on potential risk management strategies such as promoting domestic productivity growth and diversifying economic activity away from high risk sectors
