how should we live what do we owe to other people in goodness and advice the eminent philosopher judith jarvis thomson explores how we should go about answering such fundamental questions in doing so she

makes major advances in moral philosophy pointing to some deep problems for influential moral theories and describing the structure of a new and much more promising theory thomson begins by lamenting the prevalence of the idea that there is an unbridgeable gap between fact and value that to say something is good for example is not to state a fact but to do something more like expressing an attitude or feeling she sets out to challenge this view first by assessing the apparently powerful claims of consequentialism thomson makes the striking argument that this familiar theory must ultimately fail because its basic requirement that people should act to bring about the most good is meaningless it rests on an incoherent conception of goodness and supplies not mistaken advice but no advice at all thomson then outlines the theory that she thinks we should opt for instead this theory says that no acts are simply good an act can at most be good in one or another way as for example good for smith or for jones what we ought to do is most importantly to avoid injustice and whether an act is unjust is a function both of the rights of those affected including the agent and of how good or bad the act is for them the book which originated in the tanner lectures that thomson delivered at princeton university s center for human values in 1999 includes two chapters by thomson goodness and advice provocative comments by four prominent scholars martha nussbaum jerome schneewind philip fisher and barbara herrnstein smith and replies by thomson to those comments

this book is a contribution to ongoing debates in the philosophy of language about reference and truth the ideas discussed have been important not only in philosophy but in logic linguistics psychology computer science and other areas concerned with thought and communication taylor was an important philosopher and led stanford s influential symbolic systems program graduates of which are leaders in silicon valley the book is not elementary but it presents rich and subtle products of his years of thought on important topics with many examples and clear discussions

this volume offers a new hands on approach to teaching discrete mathematics a simple functional language is used to allow students to experiment with mathematical notations which are traditionally difficult to pick up this practical approach provides students with instant feedback and also allows lecturers to monitor progress easily all the material needed to use the book will be available via ftp the software is freely available and runs on mac pc and unix platforms including a special module which implements the concepts to be learned no prior knowledge of functional programming is required apart from list comprehension which is comprehensively covered in the text everything the students need is either provided for them or can be picked up easily as they go along an instructors guide will also be available on the www to help lecturers adapt existing courses

dead stars is a science fiction horror role playing game powered by the alternate d20 universal decay rules system pick a race from the ever familiar humans to the amorphous gorbrasch or sleazy helizara strap on some personal armor and pick up a sliver rifle or get a cerebral computer implant and grab your toolkit or

both then get together with your friends to face a universe of dangers wonders opportunities and quite possibly a messy death this book contains everything you will need to play or run a game in dead stars as well as rules for using the universal decay system in alternate genres incorporating everything from swords and sorcery to vehicle energy weapons personal armor nanotechnology and starships
