if the detrimental impacts of human induced climate change continue to mount technologies for geoengineering our climate i.e. deliberate modifying of the earth's climate system at a large scale are likely to receive ever greater attention from countries and societies worldwide geoengineering technologies could have profound ramifications for our societies and yet agreeing on an international governance framework in which even serious research into these planetary altering technologies can take place presents an immense international political challenge in this important book a diverse collection of internationally respected scientists philosophers legal scholars policymakers and civil society representatives examine and reflect upon the global geoengineering debate they have helped shape opening with essays examining the historic origins of contemporary geoengineering ideas the book goes on to explore varying perspectives from across the first decade of this global discourse since 2006 these essays methodically cover the practical and ethical dilemmas geoengineering poses the evolving geoengineering research agenda the challenges geoengineering technologies present to current international legal and political frameworks and differing perceptions of geoengineering from around the world the book concludes with a series of forward looking essays some drawing lessons from precedents for governing other global issues others proposing how geoengineering technologies might be governed if as they begin to emerge from the lab into the real world this book is an indispensable resource for scientists activists policymakers and political figures aiming to engage in the emerging debate about geoengineering our climate

pollution assessment for sustainable practices in applied sciences and engineering provides an integrated reference for academics and professionals working on land air and water pollution the protocols discussed and the extensive number of case studies help environmental engineers to quickly identify the correct process for projects under study the book is divided into four parts each of the first three covers a separate environment geosphere atmosphere and hydrosphere the first part covers ground assessment contamination geo statistics remote sensing gis risk assessment and management and environmental impact assessment the second part covers atmospheric assessment topics including the dynamics of contaminant transport impacts of global warming indoor and outdoor techniques and practice the third part is dedicated to the hydrosphere including both the

marine and fresh water environments finally part four examines emerging issues in pollution assessment from nanomaterials to artificial intelligence there are a wide variety of case studies in the book to help bridge the gap between concept and practice environmental engineers will benefit from the integrated approach to pollution assessment across multiple spheres practicing engineers and students will also benefit from the case studies which bring the practice side by side with fundamental concepts provides a comprehensive overview of pollution assessment covers land underground water and air pollution includes outdoor and indoor pollution assessment presents case studies that help bridge the gap between concepts and practice
