I find the rudderless nutrition and food industries in the calamity of an obesity epidemic appalling and therefore I have made an effort to explain what has previously been unexplained basic food takes an evolutionary look at the assimilation to foods by mammals and by inductive reasoning brings us forward to a paleo like limitation on what we may eat in the process explanations are offered for the failures of all diets and all intellectual and scientific approaches to nutrition also explained is the difference in obesity rates by different races and people of different ethnic background there are considered to be about five thousand species of mammals and only one applies intelligence to the choices of food consumed we are the only species to consistently get it wrong to get it right look for the naturalness of foods instead of calories and nutrients I define natural very narrowly as being the food available during our evolution over thousands of generations it became obvious with this analysis that all forms of life have a special relationship with their traditional food and would be unlikely to survive without that relationship I take a position that is 180 degrees opposite to the American Academy of Science the Dietary Advisory Committee and the Department of Agriculture and find myself in agreement with the paleo and low carbohydrate enthusiasts and now also the new diet recommendations from the Swedish government my essay is the only comprehensive explanation of the causes of the obesity epidemic and holds its most promising cure
