this publication presents a series of practical applications of different soft computing techniques to real world problems showing the enormous potential of these techniques in solving problems provided by publisher

the motor vehicle technology covered in this book has become in the more than 125 years of its history in many aspects an extremely complex and in many areas of engineering science motor vehicles must remain functional under harsh environmental conditions and extreme continuous loads and must also be reliably brought into a safe state even in the event of a failure by a few trained operators the automobile is at the same time a mass product which must be produced in millions of pieces and at extremely

low cost in addition to the fundamentals of current vehicle systems the book also provides an overview of future developments such as for example in the areas of electromobility alternative drives and driver assistance systems the basis for the book is a series of lectures on automotive engineering which has been offered by the first named author at the university of duisburg essen for many years starting from classical systems in the automobile the reader is given a systemic view of modern motor vehicles in addition to the pure basic function the modeling of individual sub systems is also discussed this gives the reader a deep understanding of the underlying principles in addition the book with the given models provides a basis for the practical application in the area of simulation technology and thus achieves a clear added value against books which merely explain the function of a system without entering into the modeling on the basis of today s vehicle systems we will continue to look at current and future systems in addition to the state of the art the reader is thus taught which topics are currently dominant in research and which developments can be expected for the future in particular a large number of practical examples are provided directly from the vehicle industry especially for students of vehicle oriented study courses and lectures the book thus enables an optimal preparation for possible future fields of activity

this book discusses the revolution of cycles and rhythms that is expected to take place in different branches of science and engineering in the 21st century with a focus on communication and information processing it presents high quality papers in vibration sciences rhythms and oscillations neurosciences mathematical sciences and communication it includes major topics in engineering and structural mechanics computer sciences biophysics and biomathematics as well as other related fields offering valuable insights it also inspires researchers to work in these fields the papers included in this book were presented at the 1st international conference on engineering vibration communication and information processing icoevci 2018 india

the two volume set Inai 12084 and 12085 constitutes the thoroughly refereed proceedings of the 24th pacific asia conference on knowledge discovery and data mining pakdd 2020 which was due to be held in singapore in may 2020 the conference was held virtually due to the covid 19 pandemic the 135 full papers presented were carefully reviewed and selected from 628 submissions the papers present new ideas original research results and practical development experiences from all kdd related areas including data mining data warehousing machine learning artificial intelligence databases statistics knowledge engineering visualization decision making systems and the emerging applications they are organized in the following topical sections recommender systems classification clustering mining social networks representation learning and embedding mining behavioral data deep learning feature extraction and selection human domain organizational and social factors in data mining mining sequential data mining imbalanced data association privacy and security supervised learning novel algorithms mining multi media multi dimensional data application mining graph and network data anomaly detection and analytics mining spatial temporal unstructured and semi
