recent years have seen remarkable progress on both advanced multimedia data processing and intelligent network information systems the objective of

this book is to contribute to the development of multimedia processing and the intelligent information systems and to provide the researches with the essentials of current knowledge experience and know how although many aspects of such systems have already been under investigation but there are many new that wait to be discovered and defined the book contains a selection of 36 papers based on original research presented during the 10th international conference on multimedia network information systems missi 2016 held on 14-16 september 2016 in wroc aw poland the papers provide an overview the achievements of researches from several countries in three continents the volume is divided into five parts a images and videos virtual and augmented reality b voice interactions in multimedia systems c tools and applications d natural language in information systems and e internet and network technologies the book is an excellent resource for researchers those working in multimedia internet and natural language technologies as well as for students interested in computer science and other related fields

this monograph is devoted to a rapidly developing area of research of the qualitative theory of difference and functional differential equations in fact in the last 25 years oscillation theory of difference and functional differential equations has attracted many researchers this has resulted in hundreds of research papers in every major mathematical journal and several books in the first chapter of this monograph we address oscillation of solutions to difference equations of various types here we also offer several new fundamental concepts such as oscillation around a point oscillation around a sequence regular oscillation periodic oscillation point wise oscillation of several orthogonal polynomials global oscillation of sequences of real valued functions oscillation in ordered sets  $r$  oscillate oscillation in linear spaces oscillation in archimedean spaces and oscillation across a family these concepts are explained through examples and supported by interesting results in the second chapter we present recent results pertaining to the oscillation of  $n$ th order functional differential equations with deviating arguments and functional differential equations of neutral type we mainly deal with integral criteria for oscillation while several results of this chapter were originally formulated for more complicated and or more general differential equations we discuss here a simplified version to elucidate the main ideas of the oscillation theory of functional differential equations further from a large number of theorems presented in this chapter we have selected the proofs of only those results which we thought would best illustrate the various strategies and ideas involved

the qualitative theory of dynamic equations is a rapidly developing area of research in the last 50 years many scholars have studied the oscillation theory

of ordinary functional neutral partial and impulsive differential equations many books deal with oscillation theory but in a way that appeals only to researchers already familiar with the subject in an effort to bring the topic to a new and broader audience the authors clearly explain oscillation theory for second order differential equations they include several examples to illustrate the theory and to inspire new direction this text is ideal for students and researchers in applied mathematics engineering science and numerical analysis

taking a pioneering approach to commentary writing brevard child's gives an entirely original treatment to the book of exodus apart from the philological notes and translation this commentary includes a form critical section looking at the growth of the tradition in its previous stages a consideration of the meaning of the text in its present form and a consideration of its meaning in its total old testament context the old testament library provides fresh and authoritative treatments of important aspects of old testament study through commentaries and general surveys the contributors are scholars of international standing
