in this book the 2000 year history of christian worship is viewed from a sociological perspective martin stringer develops the idea of discourse as a way of understanding the place of christian worship within its many and diverse social contexts beginning with the biblical material the author provides a broad survey of changes over 2000 years of the christian church together with a series of case studies that highlight particular elements of the worship or specific theoretical applications stringer does not simply examine the mainstream traditions of christian worship in europe and byzantium but also gives space to lesser known traditions in armenia india ethiopia and elsewhere offering a contribution to the ongoing debate that breaks away from a purely textual or theological study of christian worship this book provides a greater understanding of the place of worship in its social and cultural context

information technology offers powerful tools to facilitate and to assist learning across the whole curriculum the computer is certainly the most significant development in educational technology in the twentieth century history may be thought of as a staid and perhaps tradition bound subject more resistant to change than some areas yet in history too information technology is making an impact this volume shows how information technology is currently contributing to and bringing about changes in the way history is taught and learned the international selection of the contributions shows that these phenomena are not restricted to just one country the impact of information technology on history curricula is explored in depth in one section of the book whilst other sections focus on classroom activities and issues on the development of software for history and on the relevance of current information technology developments but the question which lies at the heart of it all remains that of how information technology can enhance the teacher s ability to offer situations in which learners can form and develop a real understanding of the nature of historical processes and the ways in which they can be studied

this book is a critique of cambridge school historical contextualism as the currently dominant mode of history of political thought drawing upon michael oakeshott s analysis of the logic of historical enquiry while acknowledging that the early cambridge school work represented a considerable advance towards genuinely historical histories of political thought this work identifies two major historiographical problems that have become increasingly acute the first is general an insufficiently rigorous understanding of the key concept of pastness necessarily presupposed in historical enquiry of all kinds the second is specific to histories of political thought a failure to do justice to the varieties of past political thinking especially differences between ideology and philosophy in addressing these problems the author offers a comprehensive account of the history of political thought that establishes the parameters not just of histories of ideological thinking but also of the much disputed character of histories of political philosophy since rethinking history of political thought in oakeshottian terms requires resisting current pressures to turn history into the servant of currently felt needs the book offers a sustained defence of the cultural value of modernist historical enquiry against its opponents an important work for political theorists historians of political thought and those researching intellectual history the philosophy of history and proposed new directions in contemporary historical studies

combining a detailed focus on the core skills and principles underpinning good history teaching this book will help develop a strong understanding of key historical concepts and the dynamics of the primary history national curriculum
