appraising cancer as a major medical market in the 2010s wall street investors placed their bets on single technology treatment facilities costing 100 300 million each critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy there was no valid evidence they claimed that proton beams were more effective than less costly alternatives but developers expected insurance to cover their centers staggeringly high costs and debts was speculation like this new to health care cancer radiation therapy and

the market shows how the radiation therapy specialty in the united states later called radiation oncology coevolved with its device industry throughout the twentieth century academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them in the process they incorporated market strategies into medical organization and practice although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival this thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health care systems

adolph sutro was forever seeking challenges emigrating from prussia to the u s at age 20 the california gold rush lured him west at the comstock lode in nevada he conceived an idea for a tunnel to drain the hot water that made the mines perilous and inefficient but he would have to overcome both physical obstacles and powerful opposition by the bank of california to realize his vision back in san francisco sutro bought one twelfth of the city including the famous cliff house perched over the pacific ocean when it burned to cinders on christmas day 1894 he built a massive eight story victorian replacement he used his expertise in tunneling and water solutions to create the world s largest enclosed swimming structure the sutro baths six glass covered heated saltwater pools with capacity of 1 000 swimmers other challenges followed but sutro was not invincible after a two year term as mayor of san francisco he succumbed to debilitating strokes which left him senile his death in 1898 started disputes among his heirs six children by his wife and two by his mistress that lasted more than a decade

in when the air became important medical historian janet greenlees examines the working environments of the heartlands of the british and american cotton textile industries from the nineteenth to the late twentieth centuries greenlees contends that the air quality within these pioneering workplaces was a key contributor to

the health of the wider communities of which they were a part such enclosed environments where large numbers of people labored in close quarters were ideal settings for the rapid spread of diseases including tuberculosis bronchitis and pneumonia when workers left the factories for home these diseases were transmitted throughout the local population yet operatives also brought diseases into the factory other aerial hazards common to both the community and workplace included poor ventilation and noise emphasizing the importance of the peculiarities of place as well as employers balance of workers health against manufacturing needs greenlees s pioneering book sheds light on the roots of contemporary environmentalism and occupational health reform her work highlights the complicated relationships among local business local and national politics of health and community priorities

the book draws upon new theoretical perspectives and approaches as a means of illustrating the inherently social and contextualized nature of entrepreneurial practice and advance the manner in which we critically think about and engage with various aspects of entrepreneurial practice and development

the current trend toward machine scoring of student work ericsson and haswell argue has created an emerging issue with implications for higher education across the disciplines but with particular importance for those in english departments and in administration the academic community has been silent on the issue some would say excluded from it while the commercial entities who develop essay scoring software have been very active machine scoring of student essays is the first volume to seriously consider the educational mechanisms and consequences of this trend and it offers important discussions from some of the leading scholars in writing assessment reading and evaluating student writing is a time consuming process yet it is a vital part of both student placement and coursework at post secondary institutions in recent years commercial computer evaluation programs have been developed to score student essays in both of these contexts two year colleges have been especially drawn to these programs but four year institutions are moving to them as well because of the cost savings they promise

unfortunately to a large extent the programs have been written and institutions are installing them without attention to their instructional validity or adequacy since the education software companies are moving so rapidly into what they perceive as a promising new market a wider discussion of machine scoring is vital if scholars hope to influence development and or implementation of the programs being created what is needed then is a critical resource to help teachers and administrators evaluate programs they might be considering and to more fully envision the instructional consequences of adopting them and this is the resource that ericsson and haswell are providing here
