when i was about fifteen my biological sciences teacher prof n benacchio lent me a book by paul de kruif the microbe hunters and i remained fascinated by infectious diseases i was intrigued by the potency of virulent bacteria which are constantly trying to invade our bodies and often overcome what today we call innate and adoptive immunity indeed shortly after that i was struck by his tragic death due to peritonitis later while studying medicine although medical knowledge in the 1950s was almost primordial compared with today i soon realised how the various biological systems were wonderfully organised but at the same time frail and how our life could end in a few minutes slowly it became obvious that our wellness was the result of a dynamic and very unstable equilibrium between health and disease this unstable equilibrium could be broken forever if the body's response could not reverse the pathological state i stuck a sort of poster on the wall of my room with these three words and connecting arrows health disease death as i don't believe in another world after death it became obvious to me that we should make every possible effort not only to delay death but to try always to shift the equilibrium to the left in this book i will try to show that this can be achieved as a last resort even with ozonotherapy

darwin's theory of evolutionary descent with modification rests in part on the notion that there is heritable continuity affected by transmission between ancestor and

descendant it is precisely this continuity that allows one to trace phylogenetic histories between fossil taxa of various ages and recent taxa. Darwin was clear that were an analyst to attempt such tracings then the anatomical characters of choice are those least influenced by natural selection or what are today referred to as adaptively neutral traits. The transmission of these traits is influenced solely by such mechanisms as drift and not by natural selection. The application of Darwin's theory to archaeological phenomena requires that the theory be retooled to accommodate artifacts, one aspect that has undergone this retooling concerns cultural transmission, the mechanism that affects heritable continuity between cultural phenomena. Archaeologists have long traced what is readily interpreted as heritable continuity between artifacts but the theory underpinning their tracings is seldom explicit. Thus what have been referred to as artifacts styles underpin such tracings because styles are adaptively neutral. Other traits are referred to as functional in their introduction to style function transmission. Michael O'Brien and R. Lee Lyman outline in detail the interrelations of a theory of cultural descent with modification and the concepts of drift, style and function. The chapters in the volume specifically address the issues of selection and drift and their relation to style and function in non polemic presentations. Contributors specify empirical implications of aspects of cultural transmission for evolutionary lineages of artifacts and then present archaeological data for those implications.

The fifth enlargement that took place in 2004 and 2007 was a milestone in the history of the European Union not only because of the large number of acceding countries but also because of their recent political and economic experience. Ten of them had undergone a profound transition from a totalitarian regime to democracy and from a centrally planned economy to a market based system. Most of them had income levels

significantly below those of the then EU 15 now 6 years later we can clearly see that the process of European integration both before and after 2004 was what enabled Europe to overcome the gaps between various parts of the continent the enlargement made Europe a better and wealthier place and strengthened its position in the world integration into the European Union has always been one of the strongest incentives for reform in the new member states particularly important in my view have been the development of financial markets through foreign direct investment and capital flows and the opening of labour markets which was a two way phenomenon with markets being opened up in acceding as well as the incumbent member states the fifth enlargement was thus an exercise of globalisation in miniature a practice run for the Union to tackle the challenges of the ever smaller world
