the use of computational techniques is increasing day by day in the manufacturing sector process modeling and optimization with the help of computers can reduce expensive and time consuming experiments for manufacturing good quality products metal forming and machining are two prominent manufacturing processes both of these processes involve large deformation of elasto plastic materials due to applied loads in metal forming the material is plastically deformed without causing fracture on the other hand in machining the material is deformed till fracture in order to remove material in the form of chips to understand the physics of metal forming and machining processes one needs to understand the kinematics of large deformation dependence of deformation and its rate on displacement as well as the constitutive behavior of elasto plastic materials dependence of internal forces on deformation and its rate once the physics is understood these phenomena have to be converted to mathematical relations in the form of differential equations the interaction of the work piece with the tools dies and other surroundings also needs to be expressed in a mathematical form known as the boundary and initial conditions in this book the first four chapters essentially discuss the physics of metal forming and machining processes the physical behavior of the work piece during the processes is modeled in the form of differential equations and boundary and initial conditions

manufacturing processes is meant for the students of b tech in all branches of engineering namely mechanical electronics computer information technology electrical and civil this book aims to fullfil specific need effective from 2008 09 sessions

the textbook on workshop manufacturing practices is designed to cater the needs of young minds of 21 century the aicte model curriculum and national education policy has driven a new wave in the technical education the textbook is designed not only to cater the need of the syllabus but also to look things in a different perspective the workshop is the place where the core of learning about different materials equipment tools and techniques takes place basically the workshop used to prepare the small components by hand tools sometimes they may be parts of the large machines or may may be parts for replacement repairs in this text book an attempt has been made to connect the conventional tools usage to advanced machine tools usage the relevant practical examples are quoted to make the readers more comfortable with product and processes the blooms taxonomy is fallowed in construction of each chapters and exercises the objective and multiple questions with higher

order thinking may help the readers to not only to face the semester end exam even they may help in competitive and other examinations salient features | manufacturing methods | cnc machining additive manufacturing | fitting operations power tools | electrical electronic | carpentry | plastic moulding glass cutting | metal casting | welding arc welding gas welding brazing | laboratory experiments and models | appendices | references

production technology is intended for the students of b tech in mechanical production and manufacturing engineering it deals with fundamental concepts of foundry forming welding technologies and foundry mechanization additionally material regarding furnaces solidification of castings casting defects metals and alloys and plastics has been provided the book covers both theoretical and analytical concepts the analytical concepts are introduced starting from fundamentals for easy comprehension several worked examples review and objective type questions are provided at the end of each chapter more than 150 line sketches are included which are self explanatory and easy to reproduce in the examination

compatibilization of polymer blends micro and nano scale phase morphologies interphase characterization and properties offers a comprehensive approach to the use of compatibilizers in polymer blends examining both fundamental and advanced knowledge in the field the book begins by introducing polymer blends describing thermodynamics miscibility and phase separation and explaining the main concepts of compatibilization other sections cover theoretical approaches for nearly compatible blends incompatible blends nanofillers physical compatibilization reactive compatibilization morphological and structural characterization and physico mechanical characterization finally key application areas are covered including biomedical applications packaging and automobile engineering while this book will be a highly valuable reference source for academics researchers and postgraduate students interested in polymer blends it will also be ideal for anyone involved in the fields of polymer science polymer chemistry polymer physics materials science scientists r d professionals and engineers in involved in the development or engineering of polymer products offers detailed and systematic coverage of essential and advanced topics relating to the compatibilization of polymer blends presents a critical analysis of the effect of compatibilization on morphology and thermal mechanical electrical and viscoelastic properties of polymer blends draws on novel studies and state of the art research discussing the latest issues and developments
