advances in space science volume 1 brings together research and developments in the astronautical sciences this volume is composed of six chapters that also cover the field of bioastronautics which involves the human aspects of space travel the opening chapter deals with the orbits and interplanetary trajectories and a critical evaluation of interplanetary communications the next chapters consider the problem of supplying power on board orbital and space vehicles power being needed for many tasks in space including the operation of communication systems the remaining three chapters treat manned space cabin systems the effects of radiation on man in space and the nutritional aspects of space flight this book will be of great value to space scientists engineers and researchers

books of fate and popular culture in early china is a comprehensive introduction to the manuscripts known as daybooks examples of which have been found in warring states qin and han tombs 453 bce 220 ce their main content concerns hemerology or knowledge of good and bad days daybooks reveal the place of hemerology in daily life and are invaluable sources for the study of popular culture eleven scholars have contributed chapters examining the daybooks from different perspectives detailing their significance as manuscript objects intended for everyday use and showing their connection to almanacs still popular in chinese communities today as well as to hemerological literature in medieval europe and ancient babylon contributors include marianne bujard lászló sándor chardonnens christopher cullen donald harper marc kalinowski li ling liu lexian alasdair livingstone richard smith alain thote and yan changgui

recent advances in the fields of materials science and electromagnetics indicate that

materials can be synthesized with any desired electromagnetic properties electromagnetics of complex media provides the appropriate understanding of optimum properties for a given application addressing the needs of researchers who study electromagnetics as a base for those disciplines using complex materials examples include electrooptics plasma science and engineering microwave engineering and solid state devices the book emphasizes these aspects dispersive medium tunneling of power through a plasma slab by evanescent waves characteristic waves in an anisotropic medium transient medium and frequency shifting green s function for unlike anisotropic media perturbation technique for unlike anisotropic media adiabatic analysis for modified source wave all of the above topics use one dimensional models brief discussions also include chiral media surface waves and periodic media the text focuses on bringing out the major effects due to each kind of complexity in the medium properties a plasma column in the presence of a static magnetic field is at once dispersive anisotropic and inhomogeneous thus the author uses plasma as the basic medium to illustrate some aspects of the transformation of an electromagnetic wave by a complex medium early chapters use a mathematical model that usually has one kind of complexity the medium is often assumed to be unbounded in space or has a simple plane boundary the field variables and the parameters are often assumed to vary in one spatial coordinate this eliminates the use of heavy mathematics and permits the focus to be on the effect electromagnetics of complex media aims to stimulate experimental and additional theoretical and numerical work on the effects that can be obtained by the temporal and spatial modification of the magnetoplasma parameters the book also provides the new researcher with a quick primer into the theory of using magnetoplasmas for the coherent generation of tunable radiation
