broadband opto electrical receivers in standard cmos starts from the basic fundamentals necessary for the design of opto electronic interface circuits the book continues with an in depth analysis of the photodiode transimpedance amplifier tia and limiting amplifier la to thoroughly understand the light detection mechanisms in silicon first a one dimensional and second a two dimensional model is developed analytical design equations are derived to guide the design of the amplifying circuits for the tia the focus is on the sensitivity speed trade off for the la a high gain bandwidth is pursued several practical design examples reveal the subtleties and challenges encountered during the design of high performance analog circuits broadband opto electrical receivers in standard cmos covers the total design flow of monolithic cmos optical receivers all material is experimentally verified with several cmos implementations with ultimately a fully integrated gbit s optical receiver front end including photodiode tia and la

going green is becoming a major component of the mission for electronics manufacturers worldwide while this goal seems simplistic it poses daunting dilemmas yet to compete effectively in the global economy manufacturers must take the initiative to drive this crucial movement green electronics

manufacturing creating environmental sensible products provides you with a complete reference to design develop build and install an electronic product with special consideration for the product's environmental impacts during its whole life cycle the author discusses how to integrate the state of the art technologies of finite element method fem modeling simulation and testing to create environmental sensible products of satisfying global environmental regulations such as restriction of hazardous substances rohs compliance he covers enabling techniques such as advanced fatigue life modeling crack propagation analysis and probabilistic robust design of lead free electronics the book also explores how risk engineering methodology empowers practitioners with effective tools such as buckling analysis of tin whiskers with its emphasis on reducing parts rationing materials and reusing components to make products more efficient to build green electronics intertwines today's electronics with manufacturing strategies of global sourcing concurrent engineering and total quality implemented through product and process design it can help you achieve sustainability to support future generations and at the same time preserve our natural resources green electronics manufacturing creating environmental sensible products gives you the tools to create environmental sensible products while maintaining electronics quality and reliability

for many years the prime drivers behind advances in telecommunications have been the need for increased capacity and reduced cost but recently concerns about the rising energy use of telecommunications networks have brought the issue of energy efficiency into the mix both for equipment vendors and for network operators in this chapter we provide an overview of energy consumption in telecommunications networks we identify the key contributors to energy consumption and identify trends in the growth of energy consumption we compare the performance of state of the art equipment with theoretical lower bounds on energy consumption and point to opportunities for improving the energy efficiency of core metro and access networks we show that there is potential for significant improvements in energy efficiency

this book discusses light transmission and extends to more applied fields of laser and laser technology photoelectric detection and devices photoelectric imaging and systems with explanations on theories and engineering applications addressing the intersection between optics and electrical engineering the textbook prepares graduate students to photoelectronics and can also be used as reference for engineers

this volume chronicles the proceedings of the 8th international symposium on surfactants in solution held in Gainesville, FL, June 10-15, 1990. This series of symposia have been smoothly running since 1976 but the appellation surfactants in solution was used for the first time in 1982 in Lund. Since then our logo 'sis' has become very familiar to everyone involved in surfactants. In Lund the meeting was billed as the fourth international symposium on surfactants in solution. Earlier three events were held under different rubrics but proceedings of all these symposia except the 7th 'sis' held in Ottawa in 1988 have been properly documented as a matter of fact so far 10 volumes have appeared under the title surfactants in solution 1 2 3. The program for the 9th 'sis' was very comprehensive and many ramifications of surfactants were covered and it was a veritable international event. It contained a total of 384 papers by 869 authors from practically every corner of our planet. Just the sheer number of papers is a testimonial to the high tempo of research and tremendous interest in this wonderful class of materials. As in the past there were plenary lectures 5 invited talks 37 oral presentations 195 and poster presentations 147. The plenary lectures were given by Prof. J. Th. G. Overbeek, Prof. C. A. Bunton, Prof. H. T. Tien and Dr. J. Swalen. The lecture by Prof. Overbeek, the doyen of surface and colloid science, was a real treat.

The 'MRS' symposium proceeding series is an internationally recognised reference suitable for researchers and practitioners.

This text presents a range of applications and disciplines in the fields of lasers and electro-optics. The 400 papers present advances in the field on topics including fusion, ultrafast electronics and lightwave communications.
