this open access report explores the nature and extent of students misconceptions and misunderstandings related to core concepts in physics and mathematics and physics across grades four eight and 12 twenty years of data from the IEA's Trends in International Mathematics

and science study timss and timss advanced assessments are analyzed specifically for five countries italy norway russian federation slovenia and the united states who participated in all or almost all timss and timss advanced assessments between 1995 and 2015 the report focuses on students understandings related to gravitational force in physics and linear equations in mathematics it identifies some specific misconceptions errors and misunderstandings demonstrated by the timss advanced grade 12 students for these core concepts and shows how these can be traced back to poor foundational development of these concepts in earlier grades patterns in misconceptions and misunderstandings are reported by grade country and gender in addition specific misconceptions and misunderstandings are tracked over time using trend items administered in multiple assessment cycles the study and associated methodology may enable education systems to help identify specific needs in the curriculum improve inform instruction across grades and also raise possibilities for future timss assessment design and reporting that may provide more diagnostic outcomes

the book describes the causes and effects of transient water hammer events in liquid filled pipes and describes how the powerful and stable wave plan method wpm can be used to address transients during surge modeling the authors compare and contrast wpm with the method of characteristics moc which is the other widely used surge analysis tool while moc can be useful for many situations the larger and more complex a model becomes the more the computational efficiency of wpm is necessary to avoid longer and longer analysis times the authors also describe how wpm is more generalizable than moc which is a term that describes a suite of tools consisting of several variants that were developed to address different modeling situations this book provides details on surge modeling in general and the use of wpm in particular this includes pressure attenuation determination of wave speeds in different pipe types and various liquid media pump and turbine characteristics curves and the effects of boundary conditions the discussion of boundary conditions includes an extensive look at the effects of the air water interface as it applies to bulk air intrusion into pipelines and as it relates to the use of air vacuum valves as surge protection the authors discuss surge protection design for different real world scenarios and how to model of a full list of surge control devices including a detailed discussion of check valves last the book describes the assumptions and uncertainties encountered during data collection and model building and examines the potential effect of these uncertainties where uncertainties cannot be mitigated the authors discuss ways to increase the safety factor of surge protection designs
