excerpt from an outline of industrial history with special reference to problems of the present day the object of this little book is to sketch lightly some of the facts and phenomena which lie between school boy history and the politics of the man modern life is so complicated and the development of the last two hundred years has proceeded so rapidly that those who have not specialized in history find it difficult to connect what they have learnt in their youth with the problems upon which they are called to express an opinion in manhood's days the historian confining himself to documentary evidence and in general limiting his view to times so far remote that his interpretations may be free from suspicion of prejudice or party feeling endeavours to draw a picture of things as they were without reference to things as they are or may be it is an inevitable result of his method that he should as a rule stop short of the problems which belong to his own age and it is equally inevitable in periods of rapid social economic and political change that the predominant features of one epoch should fade speedily and be replaced by others quite different in the next successive movements rise to maturity and die away to be followed by events which could hardly have been foreseen a quarter of a century before about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at

There is a great need for a history of the modern UK chemical industry to deal with developments during this century and particularly since World War I. The essential developments of the British chemical industry are outlined, and it is shown how these have led up to the modern industry. The description is divided into three parts: the origins and nineteenth-century development of the industry; transition to the modern phase; and the history of twentieth-century development. This history is followed by a section giving summary accounts of over one hundred and eighty important firms, and a section describing the objectives and activities of some forty trade associations serving the chemical industry. The information in these last two sections was supplied by the firms and organizations concerned and is thus up-to-date and accurate. This informative book provides a unique description of the present British chemical industry and its development. Its obvious merits will commend itself to students in this field and to the general reader. Publisher.
