this book provides a detailed analysis of two major aspects glottalization and nasalization of the phonology and phonetics of Coatzacoapan Mixtec as well as an overview of the segmental phonology of the language from a descriptive perspective this work provides the first published phonetic data on Coatzacoapan Mixtec one of the many underdescribed indigenous languages of the Americas of theoretical importance the phonological analyses of glottalization and nasalization serve as examples of how optimality theory can be implemented in the extended treatment of a single language in contrast to the typological emphasis of most optimality research by focusing in detail on

the whole of nasalization and glottalization systems the book explores the implications of optimality theory for the traditional notion of underlying representation in phonological theory and motivates an extension of the mechanism of constraint conjunction to include conditional relations holding between distinct constraints in the grammar at the same time the phonetic analyses provide an example of a detailed treatment of the phonetic implementation of nasalization and glottalization in the windows framework of special interest here is the relation between phonetic data and phonological feature specification in particular the data illustrate the complexity of the relationship between patterns of phonetic implementation and feature specification and lead to the conclusion that phonetic data must be interpreted in the context of the phonological system from which they are derived this book is of interest to linguists in general and especially to researchers in both phonology and phonetics to those interested in field work on underdescribed languages and to those interested in native american languages and linguistics
