this volume represents the collected papers presented at the third triennial symposium of the international basal ganglia society ibags held at capo boi italy june 10 13 1989 about 300 members of the society and participants attended the symposium which was held in a delightful environment conducive to the formal and informal exchange of scientific thought the interdisciplinary nature of the symposium was unique in its coverage of the neurosciences from molecular biology to clinical and behavioural studies the 80 papers collected here reflect the wide spectrum and the depth of studies on virtually all aspects of the basal ganglia unfortunately this book does not capture the cordial and congenial atmosphere which has characterized this and all prior symposia of the society any cooperative endeavour of this kind requires a tremendous effort and dedication usually by a small number of individuals the society is especially pleased to acknowledge the support and encouragement of the italian ministry of university and scientific research and the italian national research council in addition the society received financial support from numerous foundations and corporations which are listed separately under acknowledgements finally the editors are pleased that plenum press which has published the two previous symposia has accepted this program for publication it is our hope that vast scientific efforts reflected in these pages will be widely disseminated and further encourage every kind of research related to the basal ganglia

the volume is designed to provide an integrated overview of the results from the last fifteen years of research on chromogranins in relation to cell biology physiology and biomedicine the different chapters highlight novel activities of these proteins including their role in granule biogenesis hormone co storage stimulus processing secretion coupling autonomic sympathetic parasympathetic balance immune and cardiocirculatory function and the response to stress biomedical aspects

are also illustrated with focus on the prognostic and diagnostic significance of chromogranin in the presence of tumors cardiovascular diseases and inflammatory conditions the volume is of interest for laboratory and clinical scientists phd and post doc students that will be inspired to go deep inside the molecular biochemical physiological pharmacological and clinical aspects of these fascinating multifaceted proteins

this book can help overcome the widely observed math phobia and math aversion among undergraduate students in these subjects the book can also help them understand why they have to learn different mathematical techniques how they can be applied and how they will equip the students in their further studies the book provides a thorough but lucid exposition of most of the mathematical techniques applied in the fields of economics business and finance the book deals with topics right from high school mathematics to relatively advanced areas of integral calculus covering in the middle the topics of linear algebra differential calculus classical optimization linear and nonlinear programming and game theory though the book directly caters to the needs of undergraduate students in economics business and finance graduate students in these subjects will also definitely find the book an invaluable tool as a supplementary reading the website of the book www.emeacollege.ac.in/bmef provides supplementary materials and further readings on chapters on difference equation differential equations elements of mathematica and graphics in mathematica it also provides materials on the applications of mathematica as well as teacher and student manuals

comparative virology provides an integrated comparison of viruses based on their chemical and morphological characteristics these descriptions will not only give the reader a background but also a detailed analysis of the various groups in some instances the groups are still host related as in the case of bacteriophages and polyhedral insect viruses in others for instance in pox viruses the group comprises viruses of vertebrates and invertebrates the hosts of the bacilliform rhabdovirales range from man and other warm blooded vertebrates through invertebrate animals to plants a special chapter is devoted to viruses devoid of protein a group that is of great interest and that has only recently been recognized since there is historical and practical interest in écologie groupings such as arboviruses and oncogenic viruses chapters on such groups have also been included the book opens with a discussion on the classification of viruses chapters dealing with dna viruses and rna viruses follow and the ecologically and disease oriented groups complete the volume it is hoped that comparative virology will help bring unity to the science of virology through the comparative approach that is not dependent on virus host interactions the combined efforts of eminent contributors to discuss and evaluate new information will hopefully benefit all who are interested in virology
