context sensitive solutions css reflect the need to consider highway projects as more than just transportation facilities depending on how highway projects are integrated into the community they can have far reaching

impacts beyond their traffic or transportation function css is a comprehensive process that brings stakeholders together in a positive proactive environment to develop projects that not only meet transportation needs but also improve or enhance the community achieving a flexible context sensitive design solution requires designers to fully understand the reasons behind the processes design values and design procedures that are used this aashto guide shows highway designers how to think flexibly how to recognize the many choices and options they have and how to arrive at the best solution for the particular situation or context it also strives to emphasize that flexible design does not necessarily entail a fundamentally new design process but that it can be integrated into the existing transportation culture this publication represents a major step toward institutionalizing css into state transportation departments and other agencies charged with transportation project development

this review book has all the problems and solutions you need to review for the transportation engineering portion of the professional engineer pe exam for civil engineering this is for engineers planning to take the civil engineering peexam in transportation the chapters are taken from the civil engineering license review and civil engineering license problems and solutions the review book contains the complete review of the topics and includes example questions with step by step solutions and end of chapter practice problems also featured is information from the latest codes 1998 highway capacity manual there are 15 problems with complete step by step solutions

this volume is a study guide for the civil engineer taking the pe exam solved problems throughout each chapter reinforce the concepts discussed in the text

crash data show that more than 18 000 traffic fatalities per year result from roadway departures and over 7 000 of those roadway departure crashes involved collisions with roadside fixed objects the trb national cooperative highway research program s nchrp only document 336 proposed guidelines for fixed objects in the roadside design guide helps develop an evaluation methodology and design guidance for use by engineering practitioners to quantify the relative risk of collisions with roadside fixed objects the document is supplemental to nchrp research report 1016 design guidelines for mitigating collisions with trees and utility poles

for many years there has been a need to assemble under one cover state of the knowledge guidance on the better practices begin employed to address the full array of issues which can arise from highway and utility facilities having common right of way the highway utility guide is such a document it provides useful information relevant to joint use issues a historical perspective and good current practices issues addressed in the highway utility guide include planning and coordination design permits information management and mapping notification procedures legal safety construction maintenance reimbursement and others

nchrp report 600 explores human factors principles and findings for consideration by highway designers and traffic engineers the report is designed to help the nonexpert in human factors to consider more effectively the roadway user s capabilities and limitations in the design and operation of highway facilities

basic road safety manual for transportation engineers provides an introduction to the road safety field and describes the safety analysis

process the relationship between components of the road and safety and the steps required to complete technical studies sight distances spot speed etc

in 1960 it was observed that approximately 30 to 35 of highway fatalities occur in runoff road collisions a statistic that has remained remarkably constant through the present day the trb national cooperative highway research program s nchrp research report 972 development of safety performance based guidelines for the roadside design guide provides quantitative safety performance guidance rather than implicit guidance which will more effectively communicate design objectives and performance goals and quantify improvements to safety this change is complementary to the performance based practical design approach being promoted by the u s federal highway administration as well as the ongoing efforts to add performance based design measures to the geometric design process as documented in nchrp report 785 performance based analysis of geometric design of highways and streets supplemental to the report are four appendices appendix a roadside risk workbook appendix b derivations appendix c serious and fatal injury crash tables and appendix d research needs and knowledge gaps
