Innovative research requires courageous methods. With this in mind, *Courageous Methods in Cultural Psychology* invites students and postgraduate researchers to develop methods that will let them grasp phenomena of interest more fully. Readers will learn how to use established methods and may be asked to develop them further by combining single steps of extant procedures or by taking a completely new approach to data collection and analysis. In this book, diverse researchers present projects in which they have tried to do just that: a comprehensive process from narrowing down research questions to collecting and analyzing data is given in detail, followed by critical reflections on how well the authors have understood and shared complex realities. Project presentations are framed by theoretical chapters that deal with the challenges and opportunities of cultural psychology and interdisciplinary research. *Courageous Methods in Cultural Psychology* is sure to inspire and encourage those who wish to venture on new roads into the wild.

How do we understand and explain phenomena in psychology? What does the concept of causality mean when we discuss higher psychological functions and behavior? Is it possible to generate laws in a psychological and behavioral science—laws that go beyond statistical regularities, frequencies, and probabilities? An international group of authors compare and contrast the use of a causal model in psychology with a newer model, the catalytic model. *The Catalyzing Mind: Beyond Models of Causality* proposes an approach to the qualitative nature of psychological phenomena that focuses on the psychological significance and meaning of conditions, contexts, and situations, as well as their sign-mediated processes. Contributors develop, apply, and criticize the notion of a catalyzing mind in hopes of achieving conceptual clarity and rigor. Disciplines such as philosophy, psychology, semiotics, and biosemiotics are used for an interdisciplinary approach to the book's research topics, such as history and national identity, immigration and transitions to adulthood. All are brought into a dialogue with the concept of the catalyzing mind. With a variety of disciplines, theoretical concepts, and research topics, this book is a collective effort at an approach to move beyond models of causality for explaining and understanding psychological phenomena.
