calculate interest and print account information

Solution 3

```
java public class BankAccount private
int accountNumber private double balance private double interestRate
Constructor to initialize
account details public BankAccount(int accountNumber double initialBalance double interestRate
this.accountNumber = accountNumber; this.balance = initialBalance; this.interestRate = interestRate
Method to deposit funds public void deposit(double amount) {
    balance += amount;
}
Method to withdraw
funds public void withdraw(double amount) {
    if (balance >= amount)
        balance -= amount;
    else
        System.out.println("Insufficient funds");
}
Method to calculate interest public void calculateInterest() {
    balance *= (1 + interestRate);
}
Method to print account information public void printAccountInfo() {
    System.out.println("Account Number: " + accountNumber);
    System.out.println("Balance: " + balance);
    System.out.println("Interest Rate: " + interestRate);
}
Main method for testing the BankAccount class
4
public static void main(String args[]) {
    BankAccount account1 = new BankAccount(12345, 10000, 0.02);
    account1.deposit(5000);
    account1.withdraw(2000);
    account1.calculateInterest();
    account1.printAccountInfo();
}
```

This solution demonstrates how to create a class, define attributes, implement methods, and use the class in a test program. The solution includes comments explaining the purpose of each code segment, making it easier to understand and learn from.
