this brand new revised and expanded edition is aimed at all candidates planning to sit

European institution competitions and who wish to prepare as effectively as possible for the abstract reasoning test. Abstract reasoning questions are presented as series of diagrams containing geometric shapes which are repeated or modified according to a logical sequence. Candidates have to identify the underlying logic and find the diagram that completes the series. Abstract reasoning tests call for skills that candidates do not normally use in everyday life: the ability to visualise geometric transformations, rotations, symmetries etc; an aptitude to spot similarities between complex shapes etc. We are all capable of developing these skills. It is not a question of intelligence but of learning. Entry competitions for European institutions are highly selective. Success in the abstract reasoning test is above all a matter of method and training. This book can significantly increase your chances of success. It includes a detailed methodology illustrated with numerous examples. 9 tests of 20 questions each, arranged by level of difficulty. A detailed explanation of the answer to each question. The questions in this book are similar to those set in the competitions run by EPSO since 2015. They are different from those in previous editions and from our online test questions.

Are you chasing a job that you really want but need to get through a psychometric test to get hired? With the help of this book, you will learn exactly what the tests are like, why they matter, how to prepare for them, and how to succeed on the day. Upon purchase, you'll gain instant access to this eBook. Time limit: eBooks products do not have an expiry date. You will continue to access your digital eBook products whilst you have your Bookshelf installed.

Since the mid 80s, several laboratories around the world have been developing techniques for the operational use of tests derived from item generation. According to the experts, the major thrust of test development in the next decade will be the harnessing of item generation technology to the production of computer-developed tests. This is expected to revolutionize the way in which tests are constructed and delivered. This book is a compilation of the papers presented at a symposium held at ETS in Princeton, attended by the world's foremost experts in item generation theory and practice. Its goal is to present the major applications of cognitive principles in the construction of ability, aptitude, and achievement tests. It is an intellectual contribution to test development that is unique with great potential for changing the ways tests are generated. The intended market includes professional educators and psychologists interested in test generation.

this book will help you to prepare abstract reasoning tests for any competition or selection procedure especially to work in the eu institutions epso administrators ad assistants ast and calls for contract agents cast it contains the tools that you need to pass an abstract reasoning test many tips recommendations and shortcuts as well as an explanation about the particular conditions of epso tests we will also analyse in depth a group of sample exercises very similar to the ones that you are going to find in the real exam guiding you step by step along the process mental and technical that will allow you to get to the right answer of every question the author is an economist and has a wide and successful personal experience in public competitions including the highly competitive epso ad cycle and several epso cast profiles he is an official at the public administration in spain and has held various positions as a head of unit from 2009 to the present he has also worked as a national expert at the european commission provided training to civil servants coached many candidates for national and european selection procedures and written books for this purpose
