abusing science is a manual for intellectual self defense the most complete available for presenting the case against creationist pseudo science it is also a lucid exposition of the nature and methods of genuine science the book begins with a concise introduction to evolutionary theory for non scientists and closes with a rebuttal of the charge that this theory undermines religious and moral values it will astonish many readers that this case must still be made in the 1980s but since it must philip kitcher makes it irresistibly and forcefully not long ago a federal court struck down an arkansas law requiring that scientific creationism be taught in high school science classes contemporary creationists may have lost one legal battle but their cause continues to thrive their efforts are directed not only at state legislatures but at local school boards and textbook publishers as

kitcher argues in this rigorous but highly readable book the integrity of science is under attack the methods of inquiry used in evolutionary biology are those which are used throughout the sciences moreover modern biology is intertwined with other fields of science physics chemistry astronomy and geology creationists hope to persuade the public that education in science should be torn apart to make room for a literal reading of genesis abusing science refutes the popular complaint that the scientific establishment is dogmatic and intolerant denying academic freedom to the unorthodox it examines creationist claims seriously and systematically one by one showing clearly just why they are at best misguided at worst ludicrous

this the fifth edition of a classic book covers the modern revolution against darwinian evolution it was written by a long time veteran of the movement pushing back against evolution sharp had the foresight to pioneer a website in 1995 rae.org appropriately called revolution against evolution when the use of this format was just in its infancy sharp's book covers not only the problems with evolution but also some of the problems with some of the creation alternatives creationism is a movement involving many diverse people not all who agree with the details consequently different schools of thought called models exist in the movement for example he covers the various flood models that attempt to explain the global flood of noah's day although disagreement exists on the creation models large agreement exists on the major scientific problems with evolution sharp does a good job summarizing this area he shows that evolution neo darwinism is based on only two pillars genetic variety produced by mutations that are selected by the process called survival of the fittest the problem with this foundation is the vast majority of mutations are near neutral harmful or deleterious it is a very rare mutation that is clearly beneficial furthermore no selector exists selecting the best organisms as the natural selection theory implies survival depends on time chance and fortuitous events in short luck before any selection can occur functional genetic variety must first exist a problem that existed in darwin's day and still exists today sharp also deals with theistic evolution showing that this worldview is a compromise based on the factious belief that evolution has been scientifically confirmed and is a viable alternative to creationism only when darwinism has been empirically verified do we need to be concerned with explaining how it could be explained in harmony with the scriptures sharp shows theistic evolution cannot be supported by the scriptures nor by science the two worldviews are in irreconcilable conflict in short if the facts and science are carefully considered darwinism cannot be defended the only reason it is still around is because it is the worldview of the atheists and secularists and aggressively defended by the courts without the legal defense by the courts it would not continue to thrive if darwinism could survive on its own it would not need the legal defense of organizations such as the national center for science education which claims it is the only national organization that specializes in defending the teaching of evolution against creationist attacks let it defend itself in the court of public opinion instead of relying on lawyers and specious

claims that one side of the debate is religions and the other side is science both sides of the debate have science elements and both sides have worldview implications something is grievously wrong when both sides of a scientific question is prevented by law from being debated in taxpayer supported public schools

why evolution works and creationism fails is an impassioned argument in favor of science primarily the theory of evolution and against creationism why impassioned should not scientists be dispassionate in their work perhaps write the authors but it is impossible to remain neutral when our most successful scientific theories are under attack for religious and other reasons by laypeople and even some scientists who willfully distort scientific findings and use them for their own purposes focusing on what other books omit how science works and how pseudoscience works matt young and paul k strode demonstrate the futility of scientific creationism they debunk the notion of intelligent design and other arguments that show evolution could not have produced life in its present form concluding with a frank discussion of science and religion why evolution works and creationism fails argues that science by no means excludes religion though it ought to cast doubt on certain religious claims that are contrary to known scientific fact

global secularisms addresses the state of and prospects for secularism globally drawing from multiple fields it brings together theoretical discussion and empirical case studies that illustrate on the ground extant secularisms as they interact with various religious political social and economic contexts its point of departure is the fact that secularism is plural and that various secularisms have developed in various contexts and from various traditions around the world secularism takes on different social meanings and political valences wherever it is expressed the essays collected here provide numerous points of contact between empirical case studies and theoretical reflection this multiplicity informs and challenges the conceptual theorization of secularism as a universal doctrine analyses of different regions enrich our understanding of the meanings of secularism providing comparative range to our notions of secularity theoretical treatments help to inform our understanding of secularism in context enabling readers to discern what is at stake in the various regional expressions of secularity globally while the bulk of the essays are case based research the current thinking of leading theorists and scholars is also included

creationists have acquired a more sophisticated intellectual arsenal this book reveals the insubstantiality of their arguments creationism is no longer the simple notion it once was taken to be its new advocates have become more sophisticated in how they present their views speaking of intelligent design rather than creation science and aiming their arguments against the naturalistic philosophical method that underlies science proposing to replace it with a theistic science the creationism controversy is not just about the status of darwinian evolution it is a clash of religious and philosophical worldviews for a common underlying fear among creationists is that evolution

undermines both the basis of morality as they understand it and the possibility of purpose in life in tower of babel philosopher robert t pennock compares the views of the new creationists with those of the old and reveals the insubstantiality of their arguments one of pennock s major innovations is to turn from biological evolution to the less charged subject of linguistic evolution which has strong theoretical parallels with biological evolution both in content and in the sort of evidence scientists use to draw conclusions about origins of course an evolutionary view of language does conflict with the bible which says that god created the variety of languages at one time as punishment for the tower of babel several chapters deal with the work of phillip johnson a highly influential leader of the new creationists against his and other views pennock explains how science uses naturalism and discusses the relationship between factual and moral issues in the creationism evolution controversy the book also includes a discussion of darwin s own shift from creationist to evolutionist and an extended argument for keeping private religious beliefs separate from public scientific knowledge

verse by verse commentary of proverbs ecclesiastes and song of solomon much research and detail on the life of solomon is presented an in depth study for the serious student of the bible isn t it amazing that a man who had 700 wives and 300 concubines and ruled a country for 40 years still had time to write three of the most profound books of the bible proverbs ecclesiastes and song of solomon all show marks of divine inspiration and each can be a blessing to the reader but why would god choose a man who turned to idolatry to write these books dr henry morris author of the commentaries treasures in the psalms and the remarkable record of job addresses the enigma of solomon and presents a verse by verse commentary on his writings having studied the bible for 60 years dr morris wisdom is also quite remarkable as you will quickly learn as you read the remarkable wisdom of solomon

bledsoe offers a comprehensive and compelling case for christianity extensive intense and scholarly the text contains more than 1 400 bible and 235 other references social issues

a remarkable contribution to one of the most vexing problems in science the demarcation problem or how to distinguish science from nonscience francisco j ayala author of darwin s gift to science and religion what sets the practice of rigorously tested sound science apart from pseudoscience in this volume the contributors seek to answer this question known to philosophers of science as the demarcation problem this issue has a long history in philosophy stretching as far back as the early twentieth century and the work of karl popper but by the late 1980s scholars in the field began to treat the demarcation problem as impossible to solve and futile to ponder however the essays that massimo pigliucci and maarten boudry have assembled in this volume make a rousing case for the unequivocal importance of reflecting on the separation between pseudoscience and sound science moreover the demarcation problem is not a purely theoretical dilemma of mere academic interest

it affects parents decisions to vaccinate children and governments willingness to adopt policies that prevent climate change pseudoscience often mimics science using the superficial language and trappings of actual scientific research to seem more respectable even a well informed public can be taken in by such questionable theories dressed up as science pseudoscientific beliefs compete with sound science on the health pages of newspapers for media coverage and in laboratories for research funding now more than ever the ability to separate genuine scientific findings from spurious ones is vital and the philosophy of pseudoscience provides ground for philosophers sociologists historians and laypeople to make decisions about what science is or isn't a manual to overcome our natural cognitive biases *corriere della sera* italy

in *god vs darwin* mano singham dissects the legal battle between evolution and creationism in the classroom beginning with the scopes monkey trial in 1925 and ending with an intelligent design trial in dover pennsylvania in 2005 a publicity stunt the scopes monkey trial had less to do with legal precedence than with generating tourism dollars for a rural tennessee town but the trial did successfully spark a debate that has lasted more than 80 years and simply will not be quelled despite a succession of seemingly definitive court decisions in the greatest demonstration of survival opposition to the teaching of evolution has itself evolved attempts to completely eliminate the teaching of evolution from public schools have given way to the recognition that evolution is here to stay that explicitly religious ideas will never be allowed in public schools and that the best that can be hoped for is to chip away at the credibility of the theory of evolution dr singham deftly answers complex questions why is there such intense antagonism to the teaching of evolution in the united states what have the courts said about the various attempts to oppose it sprinkled with interesting tidbits about charles darwin and the major players of the evolution vs creationism debate *god vs darwin* is charming in its embrace of the strong passions aroused from the topic of teaching evolution in schools

computer games have become a major cultural and economic force and a subject of extensive academic interest up until now however computer games have received relatively little attention from philosophy seeking to remedy this the present collection of newly written papers by philosophers and media researchers addresses a range of philosophical questions related to three issues of crucial importance for understanding the phenomenon of computer games the nature of gameplay and player experience the moral evaluability of player and avatar actions and the reality status of the gaming environment by doing so the book aims to establish the philosophy of computer games as an important strand of computer games research and as a separate field of philosophical inquiry the book is required reading for anyone with an academic or professional interest in computer games and will also be of value to readers curious about the philosophical
