this book reviews a variety of methods for wave based acoustic simulation and recent
applications to architectural and environmental acoustic problems following an
introduction providing an overview of computational simulation of sound environment the
book is in two parts four chapters on methods and four chapters on applications the first

part explains the fundamentals and advanced techniques for three popular methods namely the finite difference time domain method the finite element method and the boundary element method as well as alternative time domain methods the second part demonstrates various applications to room acoustics simulation noise propagation simulation acoustic property simulation for building components and auralization this book is a valuable reference that covers the state of the art in computational simulation for architectural and environmental acoustics

nuclear magnetic resonance nmr is an analytical tool used by chemists and physicists to study the structure and dynamics of molecules in recent years no other technique has gained such significance as nmr spectroscopy it is used in all branches of science in which precise structural determination is required and in which the nature of interactions and reactions in solution is being studied annual reports on nmr spectroscopy has established itself as a premier means for the specialist and non specialist alike to become familiar with new techniques and applications of nmr spectroscopy this is an invaluable resource for organic inorganic analytical and physical chemists biochemists structural biologists physicists and all those studying and using nmr spectroscopy volume 82 of annual reports on nmr spectroscopy focuses on the analytical tools used by chemists and physicists taken together with other volumes of this series it provides an excellent account of progress in nmr and its many applications for anyone using nmr
