a groundbreaking exploration of how to identify and fight security threats at every level this revolutionary book combines real world security scenarios with actual tools to predict and prevent incidents of terrorism network hacking individual criminal behavior and more written by an expert with intelligence officer experience who invented the technology it explores the keys to understanding the dark side of human nature various types of security threats current and potential and how to construct a methodology to predict and combat malicious behavior the companion cd demonstrates available detection and prediction systems and presents a walkthrough on how to conduct a predictive analysis that highlights proactive security measures guides you through the process of predicting malicious behavior using real world examples and how malicious behavior may be prevented in the future illustrates ways to understand malicious intent dissect behavior and apply the available tools and methods for enhancing security covers the methodology for predicting malicious behavior how to apply a predictive methodology and tools for predicting the likelihood of domestic and global threats cd includes a series of walkthroughs demonstrating how to obtain a predictive analysis and how to use various available tools including automated behavior analysis predicting malicious behavior fuses the behavioral and computer sciences to enlighten anyone concerned with security and to aid professionals in keeping our world safer

as technology rapidly advances the complexity of societal challenges grows

necessitating intelligent solutions that can adapt and evolve however developing such solutions requires a deep understanding of computational intelligence ci and its application in addressing real world problems moreover ethical considerations surrounding ai such as bias and accountability are crucial to ensure responsible development and deployment of intelligent systems open ai and computational intelligence for society 5 0 offers a comprehensive exploration of ci providing insights into intelligent systems theory design and application this book is a practical guide for scientists engineers and researchers seeking to develop thoughtful solutions for complex societal issues integrating disruptive technologies and frameworks illuminates the path toward creating intelligent machines collaborating with humans to enhance problem solving and improve quality of life

as computer and space technologies have been developed geoscience information systems gis and remote sensing rs technologies which deal with the geospatial information have been rapidly maturing moreover over the last few decades machine learning techniques including artificial neural network ann deep learning decision tree and support vector machine svm have been successfully applied to geospatial science and engineering research fields the machine learning techniques have been widely applied to gis and rs research fields and have recently produced valuable results in the areas of geoscience environment natural hazards and natural resources this book is a collection representing novel contributions detailing machine learning techniques as applied to geoscience information systems and remote sensing

this book deals with structural failure induced by mechanical aerodynamic acoustic and aero thermal loads etc of modern aerospace vehicles in particular high speed aircraft solid propellant rocket systems and hypersonic flight vehicles where structural integrity failure prediction and service life assessment are particularly challenging due to the increasingly more demanding mission requirements and the use of non traditional materials such as non metallic composites in their construction prediction of the complex loading environment seen in high speed operation and constitutive fracture models which can adequately describe the non linear behaviour exhibited by advanced alloys and composite materials are critical

in analyzing the non linear structural response of modern aerospace vehicles and structures the state of the art of the different structural integrity assessment and prediction methodologies including non destructive structural health monitoring techniques used for the structural design service life assessment and failure analysis of the different types of aerospace vehicles are presented the chapters are written by experts from aerospace defence research organizations and academia in the fields of solid mechanics and structural mechanics and dynamics of aircraft rocket and hypersonic systems the book will serve as a useful reference document containing specialist knowledge on appropriate prediction methodologies for a given circumstance and experimental data acquired from multi national collaborative programs

diploma thesis from the year 2015 in the subject business economics miscellaneous grade distinction 90 university of bradford school of management course applied management and enterprise language english abstract purpose this study sought to enhance the process of valuing young companies with a high potential for growth by considering the link between the member base and the market value of the company outcomes were supposed to be an increase in predictive potential concerning young companies and their value as investments a potential integration of more accurate methods would lead to a significant rise in profits for investment companies moreover the resulting increase in trust in risky projects through better understanding of their value would also increase the number of new innovations hence more funding would be available due to decreasing investment risk methodology following the platonist philosophy proposed by lomas 2011 the study

incorporated three steps first an intensive investigation revealed factors which have an impact on the value of companies and evaluated traditional approaches the second step was to predict the potential of the new methods based on the member base of the organisation finally the last step was deployed in a mixed case study approach following the recommendations of yin 2009 where these predictions were challenged in particular linkedin xing and viadeo were chosen to challenge the proposed method based on the research of krafft et al 2005 and kemper 2010 findings the literature review was able to reveal several gaps in traditional methods particularly when it comes to valuing young companies additionally primary research more precisely qualitative interviews revealed that traditional calculations are at best used as secondary sources when it comes to the value of a young company accuracy was revealed by the interviews to be acceptable given the high potential for profit but considering the low success rate of 30 to 50 a high potential for more accurate prediction was revealed the model was successfully deployed in the case studies where qualitative and quantitative data was used to determine the value of each company under consideration for several different time periods the direct comparison of traditional valuation methods with the new proposed method revealed the high potential of the member based method it has been established that the new model can considerably increase the accuracy of the valuation and assist in predicting member base growth
