the bled workshops have traditionally produced reference documents providing visions for the future development of earthquake engineering as foreseen by leading researchers in the field the participants of the 2011 workshop built on the tradition of these events initiated by professors fajfar and krawinkler to honor their important research contributions and have now produced a book

providing answers to crucial questions in today's earthquake engineering what visible changes in the design practice have been brought about by performance based seismic engineering what are the critical needs for future advances what actions should be taken to respond to those needs the key answer is that research interests should go beyond the narrow technical aspects and that the seismic resilience of society as a whole should become an essential part of the planning and design process the book aims to provide essential guidelines for researchers professionals and students in the field of earthquake engineering it will also be of particular interest for all those working at insurance companies governmental civil protection and emergency management agencies that are responsible for assessing and planning community resilience the introductory chapter of the book is based on the keynote presentation given at the workshop by the late professor helmut krawinkler as such the book includes helmut's last and priceless address to the engineering community together with his vision and advice for the future development of performance based design earthquake engineering and seismic risk management

this document has a broad scope and is not focussed on design issues precast construction under seismic conditions is treated as a whole the main principles of seismic design of different structural systems their behavior and their construction techniques are presented through rules construction steps and sequences procedures and details that should lead to precast structures built in seismic areas complying with the fundamental performance requirements of collapse prevention and life safety in major earthquakes and limited damage in more frequent earthquakes the content of this document is largely limited to conventional precast construction and although some information is provided on the well known presss technology jointed ductile dry connections this latter solution is not treated in detail in this document the general overview contained in this document of alternative structural systems and connection solutions available to achieve desired performance levels intends to provide engineers architects clients and end users in general with a better appreciation of the wide range of applications that modern precast concrete technology can have in various types of construction from industrial to commercial as well as residential lastly the emphasis on practical aspects from

conceptual design to connection detailing aims to help engineers to move away from the habit of blindly following prescriptive codes in their design but instead go back to basic principles in order to achieve a more robust understanding and thus control of the seismic behaviour of the structural system as a whole as well as of its components and individual connections

in the last decades advanced materials and mechanics has become a hot topic in engineering recent trends show that the application of nanotechnology and environmental science together with advanced materials and mechanics are playing an increasingly important role in engineering applications for catching up with this current trend this boo
