this book is an up to date well referenced practical resource that offers detailed guidance on the avoidance and management of complications in patients treated for cerebrovascular and spinal vascular disease all complication avoidance and management techniques currently available to the endovascular cerebrovascular surgeon are reviewed by pioneers and leaders in the field to provide the clinician with an advanced single point of reference on the subject the book is divided into four sections it opens by discussing general issues such as definition of complications medicolegal aspects the role of resident training and checklists the subsequent three sections address the avoidance and management of complications when performing surgical endovascular and radiosurgical procedures covering the full range of indications and potential adverse events all chapters have a standardized format simplifying the search for information on a specific disease process numerous intraoperative images are included and when appropriate algorithms for the avoidance early recognition and management of complications are presented each chapter concludes with a checklist of preparatory steps and emergency procedures that each member of the team must perform in order to ensure the best possible outcomes

mayo clinic critical and neurocritical care board review is a comprehensive review of critical care medicine and neurocritical care to assist in preparation of the neurocritical care and general critical care boards

this book covers the use of nanomedicine in the delivery of neuroprotective agents including pharmacological drugs stem cells neurotrophic factors monoclonal antibodies and enzymes to induce greater beneficial effects in neurologic diseases thus the main purpose of the book is to explore the delivery of drugs either alone or in combination with stem cells to enhance neuroprotection in neurological diseases brain pathology associated with acute trauma such as head injury and brain blast injury can also be managed using novel treatment strategies in addition emphasis is made that standard patterns of brain pathology may be complicated with multiple comorbidity factors where one agent alone is not sufficient to induce brain protection enzymes and antibodies may help in combination and enhance the efficacy when administered through nanotechnology progress in nanomedicine in neurologic diseases will encourage further research in the field of neuroprotection brain injury neurodegenerative diseases neuropharmacology neuropathology and neurology students and researchers along with policy makers teachers and health care professionals may also benefit from the findings of the book for enhanced patients care

this book provides an up to date comprehensive review of the common urogenital painful conditions it will serve as a valuable

resource for clinicians urologists surgeons gynecologists palliative care physicians and many other medical providers the book reviews presenting signs and symptoms diagnostic workup differential diagnoses interventional treatments and alternative medical therapy for painful conditions that occur in the urogenital region the text also provides a clear understanding of how pain is transmitted along with what patient populations are at increased risk in suffering these conditions the risks benefits and indications are discussed in detail for the variety of interventional injections that are available to help manage these conditions

ideal for neurosurgeons neurologists neuroanesthesiologists and intensivists monitoring in neurocritical care helps you use the latest technology to more successfully detect deteriorations in neurological status in the icu this neurosurgery reference offers in depth coverage of state of the art management strategies and techniques so you can effectively monitor your patients and ensure the best outcomes understand the scientific basis and rationale of particular monitoring techniques and how they can be used to assess neuro icu patients make optimal use of the most advanced technology including transcranial doppler sonography transcranial color coded sonography measurements of jugular venous oxygen saturation near infrared spectroscopy brain electrical monitoring techniques and intracerebral microdialysis and techniques based on imaging apply multimodal monitoring for a more accurate view of brain function and utilize the latest computer systems to integrate data at the bedside access practical information on basic principles such as quality assurance ethics and icu design

this book highlights the importance of the choroid plexus which forms the blood cerebrospinal fluid barrier and is the site of the major production of the cerebrospinal fluid csf the authors show that this barrier is crucial for maintaining important compositional differences between the blood plasma and the csf the choroid plexus epithelial cells also prevent the spread of infectious agents and other blood borne entities to the brain tissue chapter topics range from the production of csf by electrolyte regulation in the choroid plexus to details on the selectively transporting nature of this barrier further the authors elaborate on the important roles of csf in sustaining brain health by providing hydration solutes and nutrients to the brain tissue readers will also learn how csf circulates signaling molecules within the compartments of the brain and removes waste products from the brain tissue elucidating the regulation of these processes in the choroid plexus is not only important for the readers understanding of normal brain development and function but is also crucial for resolving a variety of cerebral challenges that lead to brain edema as well as developing treatments for diseases the book discusses disease models like hydrocephalus sleep disorders and age related dementia its comprehensive coverage makes this volume a valuable resource for researchers in cell and neurophysiology as well as graduate

students of the neurosciences

new revised content throughout the book provides the most current information for effective practice and includes updated references as well as a discussion of pain mechanisms new screening for neurologic conditions chapter focuses on conditions that require immediate referral when the neurologic condition is in the prodromal stage and have not yet been diagnosed by a medical professional new updated screening tools include optimal screening for prediction of referral and outcome yellow flag ospro yf and optimal screening for prediction of referral and outcome review of systems ospro ros new enhanced ebook version is included with every print purchase allowing access to all of the text images and references from the book on a variety of devices new updated appendices include screening tools and checklists available in the ebook

this volume is the first to describe all clinically and experimental relevant aspects of primary and secondary brain stem lesions important to clinicians it contains a detailed description of the computer tomographical and morphological changes of the cerebral cisterns in acutely and chronically increased intracranial pressure the prognostic value of clinical parameters of primary and secondary brain stem lesions is demonstrated the possibilities of assessing the clinical course by computer aided evaluation are presented in addition to that comprehensive view of morphological radiological and clinical findings extensive investigation concerning blink reflex br and auditory evoked brain stem potentials baep supply highly relevant functional aspects of those lesions the effects of raised intracranial pressure upon br baep as well as upon cerebral blood flow and focal flow in different brain areas were studied in animal experiments and reveal new and fascinating conclusions based on these investigations a mathematical model following modern concepts of system analysis was developed the model includes the intracranial system autoregulation of cerebral flow cardiovascular components and the short time behaviour of arterial blood pressure regulation

human greatness has many connotations since the requirements for membership in this category are vague and poorly defined admittance to the mount olympus is frequently erratic and subjective especially in view of a wide penumbra zone of border cases nevertheless rising above a twilight zone of debatable cases there are individuals whose right for membership is unquestionable in science one of the unequivocal criteria for greatness relates to how far one's scientific achievement affects the opening of new horizons and points to directions for future development and progress unveiling new visions can derive only from creative people who conceive original ideas and concepts and who are daring enough to promote them against the indifference or opposition of the

establishment maintaining the integrity and the faith to one's own ideals may require extraordinary strength of character up to courting persecution or even death as happened in the middle ages and more recently in the first half of this century with regard to cecile and oskar vogt whose lives and accomplishments are described in this book thus the greatness of the vogts is based both on their penetrating vision of the future for brain research and on the sterling quality of their character which sustained a test of fire during the nazi years in germany

the book provides an update of several pathological conditions of the cns that require neurosurgical treatment the different chapters written by the most eminent international scientists and clinicians in the field of neuroscience offer a critical assessment of the relevant nosographic entities that are the subject of current scientific debate the first chapter critically analyses the new who classification of brain tumours while the second chapter is specifically devoted to intracranial tumours in the first years of life the technical aspects of neuro oncological surgery are addressed by two chapters dealing with the suprasellar approach to infratentorial tumours and how to decrease the risk of a specific complication of the surgical management of these tumours in the paediatric population namely post operative speech impairment hypothalamic tumours with their associated epilepsy and intracranial schwannomas complete the technical surgical section on intracranial tumours an interesting chapter presents the latest advances in clinical prediction in neurosurgery spinal problems are discussed in two chapters the first considering evolving concepts on craniovertebral and spinal instability and the second chiari malformations the management of intracranial arachnoid cysts is still a matter of controversy as demonstrated in a specific chapter of the book another chapter deals with subdural haematomas in both adults and children hydrocephalus is treated in two chapters devoted to two post inflammatory or post infectious complications leading to specific and difficult to treat abnormalities in the csf circulation the final chapter of the book illustrates the rationale behind midface advancement in craniosynostosis as with the previous volume in the series the present volume represents an important contribution to the advancement of neurosurgical specialties
