then the velocity function is $v(t) = 2t$. At time $t = 3$ seconds the car's velocity is 8 units/second. Visual A graph depicting a parabola representing the position function and its tangent line at $t = 3$ showing the instantaneous velocity 2.

Integrals and Accumulation Suppose you're calculating the area under a curve. The definite integral provides the solution. If you're finding the area under the curve $f(x)$ from x_0 to x_2 , the integral would be calculated as $\int_{x_0}^{x_2} f(x) dx = 83$ square units. Visual A graph showing the area under the curve of $f(x)$ from x_0 to x_2 shaded to highlight the calculated area.

3 Optimization Problems A classic calculus application involves finding maximum or minimum values. For example, you might want to maximize the area of a rectangular garden given a fixed perimeter. Using calculus, you can derive the dimensions that maximize the area. Visual A diagram showing a rectangle with labeled sides and a short explanation of how calculus is used to maximize the area.

Howto Section Tackling a Challenging Problem Let's tackle a problem involving related rates. **Problem** A ladder 10 meters long rests against a vertical wall. If the bottom of the ladder slides away from the wall at a rate of 1 m/s, how fast is the top of the ladder sliding down the wall when the bottom of the ladder is 6 meters from the wall? **Solution** Stepbystep solution using derivatives and the Pythagorean theorem would be included here explaining each step clearly and concisely. This section would include a detailed stepbystep solution utilizing diagrams and formulas to illustrate the process.
