the goblin and the ocean's secret summary of this story the goblin and the ocean's secret is a children's fairy tale about a curious and brave monster named gob gob is amazed by how big the ocean is he can see it from his home which is in the middle of a thick forest near the water he decides to explore the ocean to find out more about it so he packs food and drink into a small backpack gob spends a long time making his way through the thick jungle before he gets to the beach he wades into the water after swimming for several hours he finally gets to an island in the middle of the ocean in a small cave on the island gob finds a treasure chest full of things one of them is a small gem that pulsed with a soft light as soon as he picks up the crystal he realizes that it is the key to opening the secrets of the sea and he feels a strange rush of energy gob makes his way back to his people the goblins who are having a hard time making it through the harsh winter and are quickly running out of food and supplies he shows them how the crystal can use the power of the ocean to bring warmth and plenty to their town he also tells them how this is done gob and his friends come up with a way to use the power of the crystal to heat their homes and grow food but their victory doesn't last long because a group of evil goblins who are jealous of gob's success attack their town they are willing to do anything to get the crystal because they want it for themselves gob gives the order for his friends to run away but he stays put to fight the enemy he uses the power of the sea to give himself a quick burst of strength and throw them crystal high into the air the evil goblins are scared away and the crystal shines brighter than ever before but winning does not come without a cost after letting out too much energy the crystal breaks into a million pieces which then scatters all over the forest floor gob's heart is broken but he quickly realizes that the pieces of the crystal still have their life force he puts all these parts together and comes up with a new way to use the power of the ocean it's not as strong as the original crystal but it's enough to support his group and keep them warm and fed gob realizes that the ocean's main secret is not just the energy it has but rather the chance to work together and help each other that it represents he has decided that information is not something that can be owned or controlled instead it is something that should be shared and used for the good of society he is grateful for the help and support he has gotten from his friends and advisors and he knows that he needs to keep working with them to build a better future in the end gob and his people learn to live happily with the sea and use its power to keep themselves and their community alive when gob looks out at the ocean and sees how big it is it reminds him that he still has a lot to learn and understand on the other hand he is no

longer afraid of things he can't know he is sure that if he and his people work hard don't give up and stick together they will be able to overcome any problem and use the power of the sea to build a better future for themselves and their society when it comes to learning and understanding the goblin and the ocean's secret is an uplifting story that shows how important it is to be persistent dedicated work together and be thankful this lesson is meant for kids and teens it also shows the possible benefits and risks of seeking knowledge and understanding as well as the importance of putting information to use for practical reasons and the good of society

from the beginning of chapter i the ocean and its origin looking at the land we divide the surface of the earth into eastern and western hemispheres but looking at the water we make an opposite classification encircle the globe in your library with a rubber band so that it cuts across south america from about porto alegre to lima on one side and through southern siam and the northernmost of the philippine islands on the other and you make hemispheres the northern of which with london at its center contains almost all the land of the globe while the southern with new zealand as its central point is almost entirely water australia and the narrow southern half of south america being the only lands of consequence in its whole area observing the map in this way noticing that besides nearly a complete half world of water south of your rubber equator much of the northern hemisphere also is afloat you are willing to believe the assertion that there is almost three times as much of the outside of the earth hidden under the waves as appears above them the estimate in round numbers is one hundred and fifty million square statute miles of ocean surface as compared with about fifty million square miles of land on the globe to the people whose speculations in geography are the oldest that have come down to us the earth seemed to be an island around which was perpetually flowing a

river with no further shore visible beyond it they thought lay the abodes of the dead this river as the source of all other rivers and waters was deified by the early greeks and placed among their highest gods as oceanus whence our word ocean accompanying or belonging to him there grew up in the fertile imagination of that poetic people a large company of gods and goddesses while men hid their absence of real knowledge by peopling the deep with quaint monsters the word for ocean mare in the latin tongue means by derivation a desert and the greeks spoke of it as the barren brine over these old fables we need not linger all the myths and guesswork that went before history represented the sea as older than the land and told how creation began by lifting the earth above the universal waste of waters the story in genesis is only one of many such stories
