when this classic book was first published in 1926 L S Vygotsky was well on his way to becoming one of the leading intellectuals in Russia. His study of the psychology of education led him to believe that the child should be the main figure in the educational process and the efforts of the teacher should be directed toward organizing, not dictating, the child's development. The educational process must be based on the student's individual activity. He states in *Educational Psychology and the Art of Education* that it should involve nothing more than guiding and monitoring this activity. At a time when most education consisted of rote memorization and thwacks across the wrist with a ruler, these ideas were considered quite radical. Today's educators can find much that is of use in the pages of *Educational Psychology*. Vygotsky addresses many issues that are still relevant in the 1990s: abnormal social behavior, the nurturing of creativity and reasoning problems, with attention and memory in a bold and opinionated fashion that is sure to delight educators as well as lovers of classical Russian writing. Psychologists will also find the book useful for its fascinating glimpses into the study of psychology in the early twentieth century.

The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an educational setting, loosely defined as anything from pre school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development and measurement and statistics to educational settings, both school and community based.
