for thousands of years it is generally believed that mathematics begins with the natural numbers and counting but there is something more fundamental than counting it is the grouping of things if a child is shown a picture of a farm with sheep and cows here and there and asked to count the number of sheep the child would first put the sheep in a group mentally and then count the number of sheep in the group without grouping counting cannot happen therefore mathematics begins with the grouping of objects which is the object of study of set theory in this book we explore the fundamental concepts of sets and related topics propositional logic methods of proof relations and functions unlike the technical approach adopted in most books we use many everyday examples to show that these concepts can be found everywhere in our daily life the book also has plenty of exercises and solutions to all exercises are provided

the purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present it aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed each section offers insights into the origins debates methodologies and newer perspectives that characterize the discipline today contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy editorial advisory board andrew
