language specific in other words syntactic structure is almost entirely language specific attempts to find a universal formal model are doomed to failure radical construction grammar integrates concepts from typological theory and construction grammar to uncover the genuine universals of grammar constructions are represented as complex symbolic units pairing form and meaning the semantic map model of typological theory is used to map category distributions on a largely universal conceptual space universals of grammar are found in the mapping of meaning onto form systematic patterns of grammatical variation provide evidence for the topography of conceptual space which in turn reflects the geography of the human mind
