this book is a collection of original research papers and expository articles from the
scientific program of the 2004 05 emphasis year on stochastic analysis and partial
differential equations at northwestern university many well known mathematicians
attended the events and submitted their contributions for this volume topics from
stochastic analysis discussed in this volume include stochastic analysis of turbulence
markov processes microscopic lattice dynamics microscopic interacting particle systems
and stochastic analysis on manifolds topics from partial differential equations include
kinetic equations hyperbolic conservation laws navier stokes equations and hamilton jacobi

equations a variety of methods such as numerical analysis homogenization measure theoretical analysis entropy analysis weak convergence analysis fourier analysis and its calculus are further developed and applied all these topics are naturally interrelated and represent a cross section of the most significant recent advances and current trends and directions in stochastic analysis and partial differential equations this volume is suitable for researchers and graduate students interested in stochastic analysis partial differential equations and related analysis and applications

the first of two volumes in the electronic design automation for integrated circuits handbook second edition electronic design automation for ic system design verification and testing thoroughly examines system level design microarchitectural design logic verification and testing chapters contributed by leading experts authoritatively discuss processor modeling and design tools using performance metrics to select microprocessor cores for integrated circuit ic designs design and verification languages digital simulation hardware acceleration and emulation and much more new to this edition major updates appearing in the initial phases of the design flow where the level of abstraction keeps rising to support more functionality with lower non recurring engineering nre costs significant revisions reflected in the final phases of the design flow where the complexity due to smaller and smaller geometries is compounded by the slow progress of shorter wavelength lithography new coverage of cutting edge applications and approaches realized in the decade since publication of the previous edition these are illustrated by new chapters on high level synthesis system on chip soc block based design and back annotating system level models offering improved depth and modernity electronic design automation for ic system design verification and testing provides a valuable state of the art reference for electronic design automation eda students researchers and professionals
