this edited volume brings together a broad range of international science education

studies focusing on the interplay of teaching and learning science it recognizes the complexity present in today's education associated with major science related issues faced by society such as climate change diseases and pandemics global conflicts over energy food and water the studies discussed in this volume are focused on presenting different opportunities to teach these convoluted matters in order to find simplicity within the complexity and make it accessible to learners they bring together the challenges of preparing the students of today to become scientifically informed citizens of tomorrow

what if atlantis wasn't a myth but an early precursor to a new age of great flooding across the globe scientists and civilians alike are noticing rapidly rising sea levels and higher and higher tides pushing more water directly into the places we live from our most vibrant historic cities to our last remaining traditional coastal villages with each crack in the great ice sheets of the arctic and antarctica and each tick upwards of earth's thermometer we are moving closer to the brink of broad disaster by century's end hundreds of millions of people will be retreating from the world's shores as our coasts become inundated and our landscapes transformed from island nations to the world's major cities coastal regions will disappear engineering projects to hold back the water are bold and may buy some time yet despite international efforts and tireless research there is no permanent solution no barriers to erect or walls to build that will protect us in the end from the drowning of the world as we know it the water will come is the definitive account of the coming water why and how this will happen and what it will all mean as he travels across twelve countries and reports from the front lines acclaimed journalist jeff goodell employs fact science and first person on the ground journalism to show vivid scenes from what already is becoming a water world an immersive mildly gonzo and depressingly well timed book about the drenching effects of global warming and a powerful reminder that we can bury our heads in the sand about climate change for only so long before the sand itself disappears jennifer senior new york times

for over half a century university of michigan programs in nuclear science and engineering have provided national and global leadership first through the research programs of the michigan memorial phoenix project and later through the educational and research activities of the faculty and students in the department of nuclear engineering and radiological sciences
