with the advent of the clean air act in 1970 the number of air pollution control equipment installations has increased at an accelerated pace although much has been written on attaining collection performance with the various control devices a major void has occurred in the identification and transfer of information needed to help reduce maintenance costs and to prevent deterioration of collector performance although design and selection information is presented it is the primary intention of this book to discuss operation and maintenance topics and explore many of the repetitive problems that have plagued users of air pollution control equipment the existence of these problems may be related to the complexity of the process or to a lack of well defined operation techniques among other reasons in any event this book intends to emphasize where and how these factors can have a major impact on the maintenance problems of control devices operation and maintenance problems have plagued users for nearly 100 years

this book focuses specifically on the environmental issues related to the air pollution control and design it is divided into four parts 1 fundamentals of air pollution control 2 fundamentals of energy utilization 3 gaseous control and design and 4 particulate control and design each consisting of four to six chapters the topics covered in this book not only introduce the basic concepts of air pollution control and design but also address the fundamentals of energy utilization in the context of good engineering practice and policy instruments it also features several innovative technologies and integrated methodologies

relating to gaseous and particulate matter control and design to facilitate technology integration and meet the need for comprehensive information on sustainable development the book discusses a wide range of areas concerning the principles applications and assessment of air pollution control and design and thermodynamics heat transfer advanced combustion and renewable energy for energy utilization it also features regulations and policy instruments adopted around the globe as well as several case studies presenting the emerging challenges new concepts innovative methodologies and resolving strategies as well as illustrative and inspiring case studies it appeals to a wide range of readers such as researchers graduate students engineers policy makers and entrepreneurs

a 25 year tradition of excellence is extended in the fourth edition of this highly regarded text in clear authoritative language the authors discuss the philosophy and procedures for the design of air pollution control systems their objective is twofold to present detailed information on air pollution and its control and to provide formal design training for engineering students new to this edition is a comprehensive chapter on carbon dioxide control perhaps the most critical emerging issue in the field emphasis is on methods to reduce carbon dioxide emissions and the technologies for carbon capture and sequestration an expanded discussion of control technologies for coal fired power plants includes details on the capture of nox and mercury emissions all chapters have been revised to reflect the most recent information on u s air quality trends and standards moreover where available equations for equipment cost estimation have been updated to the present time abundant illustrations clarify the concepts presented while numerous examples and end of chapter problems reinforce the design principles and provide opportunities for students to enhance their problem solving skills

presents current methods for controlling air pollution generated at stationary industrial sources and provides complete coverage of control options equipment and techniques the main focus of the book is on practical solutions to air pollution problems

covers cost estimation incineration adsorption devices flue gas desulfurization control of nitrogen oxides particulate emissions control cyclonic devices electrostatic precipitators and
