recent advances and development in the field of robotics with emphasis on the mathematical and computational aspects are presented in this volume the papers are grouped under several themes which span the broad scope of modern robotics including sensory systems computational

parallel processing aspects kinematics dynamics and robot control manufacturing environment and artificial intelligence each area can be treated as a self contained unit or in terms of its relationship with other areas of the field as an international overview of the present day research in robotics this book should be of interest to those wishing to become more acquainted with the topic including academic and industrial researchers in the areas of systems robotics and advanced manufacturing techniques

rather than parallelizing sequential algorithms the authors develop new back substitution free parallel algorithms using a bidirectional elimination technique for the solution of both dense and sparse linear equations they provide full coverage of bidirectional parallel algorithms based on gaussian elimination lu factorization householder reductions and modified gram schmidt orthogonalization givens rotations sparse cholesky factorization and sparse factorization clearly demonstrating how the bidirectional approach allows for improved speedup numerical stability and efficient implementation on multiprocessor systems plus the book offers a useful survey of the vast literature on direct methods introductory material on solving systems of linear equations and exercises it is an invaluable resource for computer scientists researchers in parallel linear algebra and anyone with an interest in parallel programming book jacket

aircraft structures for engineering students sixth edition is the leading self contained aircraft structures course text it covers all fundamental subjects including elasticity structural analysis airworthiness and aeroelasticity now in its sixth edition the author has expanded the book s coverage of analysis and design of composite materials for use in aircraft and has added new real world and design based examples along with new end of chapter problems of varying complexity expanded coverage of composite materials and structures new practical and design based examples and problems throughout the text aid understanding and relate concepts to real world applications updated and additional matlab examples and exercises support use of computational tools in analysis and design available online teaching and learning tools include downloadable matlab code solutions manual and image bank of figures from the book
