this paper investigates labor market dynamics in japan during the covid 19 pandemic drawing on macro and micro data the pandemic and related containment measures had a

large negative impact on employment labor force participation earnings and labor market mobility although policy support through furlough schemes partially mitigated the rise in unemployment our results indicate that industry effects were a crucial driver of labor market outcomes for different groups of employees women younger age groups nonregular self employed and low income workers accounted for a disproportional share of employment in the hardest hit industries we also find empirical evidence for the need to improve childcare and related support training and upskilling offerings and teleworking availability and the role of skill mismatches in reducing labor market mobility and resource reallocation
