a role for vitamin a in living organisms has been known throughout human history in the last 100 years the biochemical nature of vitamin a and its active derivative retinoic acid its physiological impact on growth processes and the essential details of its mechanism of action have been revealed by investigations carried out by researchers using vertebrate and more recently invertebrate models to study a multiplicity of processes and conditions encompassing embryogenesis postnatal development to old age a wealth of intercellular interactions intracellular signaling systems and molecular mechanisms have been described and the overall conclusion is that retinoic acid is essential for life this book series with chapters authored by experts in every aspect of this complex field unifies the knowledge base and mechanisms currently known in detailed engaging well illustrated focused chapters that synthesize information for each specific area in view of the recent explosion in this field it is timely to publish a contemporary comprehensive book series recapitulating the most exciting developments in the field and covering fundamental research in molecular mechanisms of vitamin a action its role in physiology development and continued well being and the potential of vitamin a derivatives and synthetic mimetics to serve as therapeutic treatments for cancers and other debilitating human diseases volume i here we present the first volume of a multi volume series on retinoic acid signaling that will cover all aspects of this broad and diverse field one aim of volume i is to present a compilation of topics related to the biochemistry of nuclear retinoic acid receptors from their architecture when bound to dna and associated with their coregulators to their ability to regulate target gene transcription a second aim is to provide insight into recent advances that have been made in identifying novel targets and non genomic effects of retinoic acid volume i is divided into ten chapters contributed by prominent experts in their respective fields each chapter starts with the history of the area of research then the key findings that contributed to development of the field are described followed by a detailed look at key findings and progress that are being made in current ongoing research each chapter is concluded with a discussion of the relevance of the research and a perspective on missing pieces and lingering gaps that the author recommends will be important in defining future directions in vitamin a research

transcription factors normal and malignant development of blood cells katya ravid and jonathan licht the  
role of transcription factors in activating specific genes in blood cells is an important facet of hematopoiesis  
equally important however is the pursuit of genes rearranged and aberrantly activated in leukemias blood  
malignancies transcription factors normal and malignant development of blood cells focuses on those major  
transcription factors involved in activation of lineage specific gene expression during normal versus  
malignant development of specific blood lineages as revealed from gene promoter studies knockout of  
transcription factors in mice models and the identification and characterization of chromosomal  
rearrangement in human blood leukemias this complete digest of current transcription factor data offers  
comprehensive coverage of the myriad of transcription factors in blood cell development composed by  
established experts in the field in addition to updating the reader on the connection between chromosomal  
translocations involving transcription factors and cellular transformation leading to leukemia transcription  
factors also reviews such subjects as transcription factors and the megakaryocytic myeloid and erythroid
